Statistical And Computational Methods In Data Analysis:

Data Analysis Siegmund Brandt,2012-12-06 1 1 Typical Problems of Data Analysis Every branch of experimental science after passing through an early stage of qualitative description concerns itself with quantitative studies of the phenomena of interest i e measurements In addition to designing and carrying out the experiment an important task is the accurate evaluation and complete exploitation of the data obtained Let us list a few typical problems 1 A study is made of the weight of laboratory animals under the influence of various drugs After the application of drug A to 25 animals an average increase of 5 % is observed Drug B used on 10 animals yields a 3 % increase Is drug A more effective The averages 5 % and 3 % give practically no answer to this question since the lower value may have been caused by a single animal that lost weight for some unrelated reason One must therefore study the distribution of individual weights and their spread around the average value Moreover one has to decide whether the number of test animals used will enable one to differentiate with a certain accuracy between the effects of the two drugs 2 In experiments on crystal growth it is essential to maintain exactly the ratios of the different components From a total of 500 crystals a sample of 20 is selected and analyzed

Liu,James Mcgree,Zongyuan Ge,Yang Xie,2015-11-20 Due to the scale and complexity of data sets currently being collected in areas such as health transportation environmental science engineering information technology business and finance modern quantitative analysts are seeking improved and appropriate computational and statistical methods to explore model and draw inferences from big data This book aims to introduce suitable approaches for such endeavours providing applications and case studies for the purpose of demonstration Computational and Statistical Methods for Analysing Big Data with Applications starts with an overview of the era of big data It then goes onto explain the computational and statistical methods which have been commonly applied in the big data revolution For each of these methods an example is provided as a guide to its application Five case studies are presented next focusing on computer vision with massive training data spatial data analysis advanced experimental design methods for big data big data in clinical medicine and analysing data collected from mobile devices respectively The book concludes with some final thoughts and suggested areas for future research in big data Advanced computational and statistical methodologies for analysing big data are developed Experimental design

methodologies are described and implemented to make the analysis of big data more computationally tractable Case studies are discussed to demonstrate the implementation of the developed methods Five high impact areas of application are studied computer vision geosciences commerce healthcare and transportation Computing code programs are provided where appropriate

Complex Models and Computational Methods in Statistics Matteo Grigoletto, Francesco Lisi, Sonia Petrone, 2013-01-26 The use of computational methods in statistics to face complex problems and highly dimensional data as well as the widespread availability of computer technology is no news The range of applications instead is unprecedented As often occurs new and complex data types require new strategies demanding for the development of novel statistical methods and suggesting stimulating mathematical problems This book is addressed to researchers working at the forefront of the statistical analysis of complex systems and using computationally intensive statistical methods Computational Methods for Data Analysis John M. Statistical and Computational Methods for Complex Multicenter Data Analysis Peter Bouman, 2004 Data Science in Social Research Uwe Engel, Lena Dahlhaus, 2026-02-02 Society is changing it is becoming more diverse and digital Social media today plays a central role in human communication With a changing society the way social scientists analyze it is also evolving In recent years it has become significantly more difficult to encourage people to participate in surveys Furthermore digitization opens up data options that go beyond the survey method Information published online represents valuable digital behavioral traces and provides social researchers with another important source of data alongside their scientific surveys which in recent years have increasingly been conducted online Computational methods have played a central role in social research from the very beginning This applies today more than ever to data analysis but now also to data collection The increasing attention paid to machine learning methods in the statistical analysis of social science data represents a further remarkable development in the analysis of social

science data This textbook addresses these developments and familiarizes readers with both elementary and more advanced methods of data analysis Fundamentals and techniques of data management programming with R statistical data analysis descriptive and causal inference as well as predictive modeling are covered in depth All methods are exemplified using real data either from survey research the social media platform Bluesky or a large digital newspaper archive Thematically these data are focused on current sociological topics particularly those related to human happiness energy transition and climate policy AI political attitudes and the rise in right wing voting Data science encompasses more than the algorithms required for data analysis and statistical learning No less relevant are the rules by which social research and data analysis are conducted data quality is ensured and the results are validated This textbook aims to provide this overview *Applications in Statistical Computing* Nadja Bauer,Katja Ickstadt,Karsten Lübke,Gero Szepannek,Heike Trautmann,Maurizio Vichi,2019-10-12 This volume presents a selection of research papers on various topics at the interface of statistics and computer science Emphasis is put on the practical applications of statistical methods in various disciplines using machine learning and other computational methods The book covers fields of research including the design of experiments computational statistics music data analysis statistical process control biometrics industrial engineering and econometrics Gathering innovative high quality and scientifically relevant contributions the volume was published in honor of Claus Weihs Professor of Computational Statistics at TU Dortmund University on the occasion of his 66th birthday *Applied Modeling Techniques and Data Analysis 1* Yiannis Dimotikalis,Alex Karagrigoriou,Christina Parpoula,Christos H. Skiadas,2021-05-11 BIG DATA ARTIFICIAL INTELLIGENCE AND DATA ANALYSIS SET Coordinated by Jacques Janssen Data analysis is a scientific field that continues to grow enormously most notably over the last few decades following rapid growth within the tech industry as well as the wide applicability of computational techniques alongside new advances in analytic tools Modeling enables data analysts to identify relationships make predictions and to understand interpret and visualize the extracted information more strategically This book includes the most recent advances on this topic meeting increasing demand from wide circles of the scientific community *Applied Modeling Techniques and Data Analysis 1* is a collective work by a number of leading scientists analysts engineers mathematicians and statisticians working on the front end of data analysis and modeling applications The chapters cover a cross section of current concerns and research interests in the above scientific areas The collected material is divided into appropriate sections to provide the reader with both theoretical and applied information on data analysis methods models and techniques along with appropriate applications *Complex Data Modeling and Computationally Intensive Statistical Methods* ,2011-08-14 *Semantic Computing* Phillip Chen-yu Sheu,2017-08-23 As the first volume of World Scientific Encyclopedia with Semantic Computing and Robotic Intelligence this volume is designed to lay the foundation for the understanding of the Semantic Computing SC as a core concept to study Robotic Intelligence in the subsequent volumes This volume aims to provide a reference to the development of Semantic Computing in the terms of

meaning context and intention It brings together a series of technical notes in average no longer than 10 pages in length each focuses on one topic in Semantic Computing being review article or research paper to explain the fundamental concepts models or algorithms and possible applications of the technology concerned This volume will address three core areas in Semantic Computing
