 with elements of the form $a + b e_1 + c e_2 + d e_1 \wedge e_2$

$$v \wedge w = (a e_1 + b e_2) \wedge (c e_1 + d e_2) = (ad - bc) e_1 \wedge e_2$$

Tensor Spaces And Exterior Algebra:

Tensor Spaces and Exterior Algebra Takeo Yokonuma, 1992 This book explains as clearly as possible tensors and such related topics as tensor products of vector spaces tensor algebras and exterior algebras You will appreciate Yokonuma's lucid and methodical treatment of the subject This book is useful in undergraduate and graduate courses in multilinear algebra

Tensor Spaces and Exterior Algebra begins with basic notions associated with tensors to facilitate understanding of the definitions Yokonuma often presents two or more different ways of describing one object Next the properties and applications of tensors are developed including the classical definition of tensors and the description of relative tensors Also discussed are the algebraic foundations of tensor calculus and applications of exterior algebra to determinants and to geometry This book closes with an examination of algebraic systems with bilinear multiplication in particular Yokonuma discusses the theory of replicas of Chevalley and several properties of Lie algebras deduced from them

From Vectors to Tensors Juan R. Ruiz-Tolosa, Enrique Castillo, 2005-12-08 It is true that there exist many books dedicated to linear algebra and some what fewer to multilinear algebra written in several languages and perhaps one can think that no more books are needed However it is also true that in algebra many new results are continuously appearing different points of view can be used to see the mathematical objects and their associated structures and different orientations can be selected to present the material and all of them deserve publication Under the leadership of Juan Ramon Ruiz Tolosa Professor of multilinear algebra and the collaboration of Enrique Castillo Professor of applied mathematics both teaching at an engineering school in Santander a tensor textbook has been born written from a practical point of view and free from the esoteric language typical of treatises written by algebraists who are not interested in descending to numerical details The balance between following this line and keeping the rigor of classical theoretical treatises has been maintained throughout this book The book assumes a certain knowledge of linear algebra and is intended as a textbook for graduate and postgraduate students and also as a consultation book It is addressed to mathematicians physicists engineers and applied scientists with a practical orientation who are looking for powerful tensor tools to solve their problems

Modern Mathematics And Applications In Computer Graphics And Vision Hongyu Guo, 2014-04-01 This book presents a concise exposition of modern mathematical concepts models and methods with applications in computer graphics vision and machine learning The compendium is organized in four parts Algebra Geometry Topology and Applications One of the features is a unique treatment of tensor and manifold topics to make them easier for the students All proofs are omitted to give an emphasis on the exposition of the concepts Effort is made to help students to build intuition and avoid parrot like learning There is minimal inter chapter dependency Each chapter can be used as an independent crash course and the reader can start reading from any chapter almost This book is intended for upper level undergraduate students graduate students and researchers in computer graphics geometric modeling computer vision pattern recognition and machine learning It can be used as a reference book or a textbook for a
