Advanced Renewable Energy:

Advanced Renewable Energy Sources Gopal Nath Tiwari, Rajeev Kumar Mishra, 2015-11-09 This book is an ideal reference text for teaching renewable energy to engineering and science students as well as a reference book for scientists and professionals doing self study on the subject The book has twelve chapters and starts with the definition and classification of renewable and non renewable energy and their status at global level This chapter also contains the basic heat transfer mechanisms and laws of thermodynamics It then deals with availability of solar radiation at different latitudes and energy and exergy analysis of flat plate collector solar air collector solar concentrator evacuated tube collector solar water heating system solar distillation and solar cooker The following chapter discusses the basics of semiconductor its characteristics working characteristics of solar cell in dark and daylight situation fundamentals of characteristic curves of semiconductor fundamentals of PV module and array and some PVT systems Detailed discussion on biomass bio fuels and biogas and their applications and the power produced by them namely bio power is covered in the following chapters Other renewable energy sources like hydropower wind and geothermal are then covered as well as a chapter dealing with the working principle basic theory and the capability to produce power from ocean thermal tidal wave and animal energy conversion systems Subsequently net CO₂ mitigation carbon credit climate change and environmental impacts of all renewable energy resources are all covered followed by a discussion on the techno economic feasibility of any energy sources as the backbone of its success and hence energy and economic analysis The chapters deal the overall exergy of renewable energy sources by using the thermal and mechanical power and electrical energy as output SI units are used throughout the book in solving various exercises in each chapter and conversion units of various physical and chemical parameters of metals and non metals are also given in appendices

Advanced Renewable Energy Conversion Technologies and Power Plant Engineering Md Hasanuzzaman, 2025-09-01 Advanced Renewable Energy Conversion Technologies and Power Plant Engineering provides a one stop resource that covers advanced renewable energy conversion and power plant engineering offering a practical applications oriented approach The book begins by introducing renewable energy basic thermodynamics energy conversion and power plants This is followed by in depth chapters that cover a specific renewable energy source and their conversion and power plant integration including bioenergy geothermal hydroelectric ocean energy solar photovoltaics solar thermal and wind Finally energy storage technologies are considered Throughout the book chapters are supported by modeling performance analysis and case studies It will support anyone with an interest in renewable energy energy conversion technologies and power plant engineering including advanced students researchers faculty scientists engineers R D industry personnel and policymakers Combines renewable energy conversion technologies and power plant engineering in one place Covers all renewable energy sources including solar wind bioenergy geothermal hydro and more Provides guidance on suitable power plants for each renewable energy source

Advanced Renewable Energy Systems S. C. Bhatia, 2014

Advanced Solar-Distillation Systems G. N. Tiwari, Lovedeep Sahota, 2017-07-29 This book is primarily intended to serve as a textbook and reference work for graduate and professional training coursework on solar desalination of water. The book begins with an introduction to the increasing demand for potable water, various types of water pollution and its impacts on human health, and goes on to cover basics of desalination technologies. It covers all aspects of solar energy based distillation and desalination for producing potable water resources including radiation and heat transfer concepts, a history of solar distillation systems and background on solar collectors. The contents include thermal modeling and parametric study of solar distillation. Energy and exergy aspects are analyzed in detail including energy matrices of solar distillation. A special chapter on exoeconomics introduces fundamental equations which include the general balance equation, thermodynamic balance equations and economic balance equations. A chapter on Economic Analysis of Solar Distillation completes the coverage. The book includes solved examples and end of chapter exercises in the form of both problems and objective type questions. The contents of this book are useful to students, researchers, professionals and policymakers looking for a comprehensive resource on solar desalination.

Advanced Renewable Energy Systems, (Part 1 and 2) S. C. Bhatia, 2014-04-14 The book is a complete treatise on renewable energy sources and also includes issues relating to biofuels.
