**Designing Regenerative Food Systems** Marina O'Connell,2022-03-31 Here is a toolkit for farmers and growers about tried and tested agroecological methods for transforming industrial food growing into a resilient agricultural revolution The four challenges of climate change mitigation and adaptation offsetting biodiversity loss and producing enough good food for a growing population are identified The author uses the case study of her Huxhams Cross Farm to show how dead soil was transformed into a thriving fertile land drawing on a toolkit of biodynamic organic agroforestry regenerative agroecological and perma cultural methods The principles methods and techniques of each approach are explained concisely with illustrative case studies of successful examples and follow up resources such as film references The book concludes with the Huxhams Cross Farm case study with research evidence reviewing the extent to which the four challenges are tackled successfully by the Toolkit how the resilient farming revolution can be brought about by food choices policy tackling barriers such as land access the psychology of scarcity and how to build farmer capacity for the resilient food growing transition

**Plant Breeding: Past, Present and Future** John E. Bradshaw,2016-03-08 This book aims to help plant breeders by reviewing past achievements currently successful practices and emerging methods and techniques Theoretical considerations are also presented to strike the right balance between being as simple as possible but as complex as necessary The United Nations predicts that the global human population will continue rising to 9 0 billion by 2050 World food production will need to increase between 70 100 per cent in just 40 years First generation bio fuels are also using crops and cropland to produce energy rather than food In addition land area used for agriculture may remain static or even decrease as a result of degradation and climate change despite more land being theoretically available unless crops can be bred which tolerate associated abiotic stresses Lastly it is unlikely that steps can be taken to mitigate all of the climate change predicted to occur by 2050 and beyond and hence adaptation of farming systems and crop production will be required to reduce predicted negative effects on yields that will occur without crop adaptation Substantial progress will therefore be required in bridging the yield gap between what is currently achieved per unit of land and what should be possible in future with the best farming methods and best storage and transportation of food given the availability of suitably adapted cultivars including adaptation to climate change My book is divided into four parts Part I is an historical introduction Part II deals with the origin of genetic variation by mutation and recombination of DNA Part III explains how the mating system of a crop species determines the genetic structure of its landraces Part IV considers the three complementary options for future progress use of sexual reproduction in further conventional breeding base broadening and introgression mutation breeding and genetically modified crops

Despite reports of food safety and quality scandals China has a rapidly expanding organic agriculture and food sector and there is a revolution in ecological food and ethical eating in China's cities. This book shows how a set of social economic cultural and environmental conditions have converged to shape the development of a formal organic sector created by top down state developed standards and regulations and an informal organic sector created by bottom up grassroots struggles for safe healthy and sustainable food. This is generating a new civil movement focused on ecological agriculture and quality food. Organic movements and markets have typically emerged in industrialized food systems that are characterized by private land ownership declining small farm sectors consolidated farm to retail chains predominance of supermarket retail standards and laws to safeguard food safety and an active civil society sector. The authors contrast this with the Chinese context with its unique version of capitalism with social characteristics collective

farmland ownership and predominance of smallholder agriculture and emerging diverse marketing channels China's experience also reflects a commitment to domestic food security evolving food safety legislation and a civil society with limited autonomy from a semi authoritarian state that keeps shifting the terrain of what is permitted The book will be of great interest to advanced students and researchers of agricultural and food systems and policy as well as rural sociology and Chinese studies
