[At the Margins of Planning](#) Stephen A. Jay,2017-11-30 Offshore wind farms are being developed on a major scale around the UK coastline as part of the drive to increase renewable energy production This presents a new departure for the renewables sector Having fewer physical constraints than on land they avoid the planning system which currently ends at low water mark However planning authorities and the communities they represent are deeply concerned about the consequences of offshore wind farms along their coastal zones This book presents an empirical investigation into the attitudes of local planning authorities into the development of offshore wind farms examining these findings in light of wider debates about the use and management of the seas and the potential contribution of the mechanisms of planning The book also raises questions about the geographical limits of planning and how to go about establishing a form of spatial planning to cover the marine environment

Advanced Data-Driven Uncertainty Optimization for Planning, Operation, and Analysis of Renewable Power Systems Lipeng Zhu,Minghao Wang,Cong Zhang,Zhenjia Lin ,Ying Zhang,2026-01-09 The rapid deployment of renewable energy systems in the grid is reshaping the energy structure and significantly impacting the operational stability and reliability of power systems Renewable energies such as solar and wind pose significant challenges to the continuity and stability of power supply due to their variability and intermittency To address these challenges uncertainty analysis and optimization offer effective strategies to manage the uncertainties of

renewable energy thereby enhancing the resilience and stability of power systems Traditional model based approaches while effective will ultimately struggle to handle the ever growing scale and various uncertainties of energy systems The development of machine learning and data science has played a significant role in overcoming the difficulties Data driven approaches freed from the limitations of traditional models effectively complement model driven uncertainty optimization methods They demonstrate great potential in uncertainty analysis operation and optimization of power systems The purpose of this research topic is to conduct uncertainty optimization planning and analysis of renewable energy power systems and investigate the application of data driven methods in the uncertainty optimization of renewable energy power systems This will ensure the secure reliable and efficient operation of power systems We hope that this research topic will encompass the latest technologies in advanced data driven uncertainty optimization methods for the planning operation and analysis of renewable energy power systems promoting the development of renewable energy power systems towards greater intelligence efficiency and reliability This Research Topic encourages the contributions of original research articles with new data information and findings and comprehensive reviews on the advanced data driven uncertainty optimization method for planning operation and analysis of renewable power systems and other relevant topics Topics of interest for publication include but are not limited to 1 Advanced optimization methods for renewable energy power system planning 2 Uncertainty optimization techniques for the operation of renewable energy power systems 3 Risk assessment and early warning for renewable energy power system operation 4 Uncertainty analysis and computational methods for renewable energy systems 5 Energy storage optimization and planning considering stability and economics 6 Application of machine learning in power system optimal scheduling 7 Data driven renewable energy generation and load demand forecasting 8 Uncertainty analysis and optimization of active distribution networks 9 Big data based state monitoring of smart distribution networks 10 Machine learning based fault diagnosis in power systems 11 Prediction and optimization techniques for demand sides **Elgar**
