Toward New Partnerships In Remote Sensing National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Steering Committee on Space Applications and Commercialization, 2002-09-18

The technical scientific policy and institutional environment for conducting Earth science research has been changing rapidly over the past few decades. Changes in the technical environment are due both to the advent of new types and sources of remote sensing data which have higher spatial and spectral resolution and to the development of vastly expanded capabilities in data access, visualization, spatial data integration and data management. The scientific environment is changing because of the strong emphasis on global change research both nationally and internationally and the evolving data requirements for that research. And the policy and institutional environment for the production of Earth observation data is changing with the diversification of both remote sensing data and the institutions that produce the data. In this report the Space Studies Board's Steering Committee on Space Applications and Commercialization explores the implications of this changing environment, examining the opportunities and challenges it presents.

U.S. Commercial Remote Sensing Satellite Industry Kevin M. O'Connell, 2001

American firms have begun to operate their own imaging satellite systems, aiming to become an important part of the U.S. commercial remote sensing industry. To succeed over the long run, these new U.S. commercial remote sensing satellite firms need a combination of reliable technologies, government policies that encourage U.S. industry competitiveness, a strong international presence, and sound business plans to ensure their competitiveness in both the domestic and international marketplaces. The greatest risks for these firms come from the challenge of transforming themselves from imagery data providers to strong competitors, as information age companies, the need to master the technical risks of building and operating sophisticated imaging satellite systems, and the requirement to operate effectively in a complex international business environment. In addition, the government's policymaking process has yet to achieve the degree of predictability, timeliness, and transparency that the firms need if they are expected to operate effectively in a highly competitive and rapidly changing global marketplace. The authors conclude with six recommendations that the U.S. Department of Commerce should adopt to best fulfill its responsibilities for promoting the U.S. commercial remote sensing industry and for encouraging the competitiveness of new private imaging satellite firms.
