,1956 *Types of Spaceships* Martin K Ettington,2020-09-06 THERE ARE A LOT MORE SPACESHIPS WHICH HAVE BEEN
BUILT AND WILL BE BUILT THAN YOU MIGHT THINK This book is the seventh volume of The Living in Space Series Each
volume focuses on one particular technology of living in space In this book the focus is on spaceships used to access and
travel in space In my research I was pretty amazed at how many spaceships have been designed the large number available
in the current era and that many more are already on the drawing boards Some spaceships like the Space Shuttle seemed
like a great idea back in the 1970s and 1980s But due to the compromises in design were very expensive for each flight and
kind of dangerous too Even though the Space Shuttle was flown for over 30 years it was eventually cancelled because of cost
issues The newer transportation systems focus on lowering costs through reusability This will lead to a much better long
term paradigm for expanding people s entry into space because of the lower costs reusability provides I also need to
determine what types of ships to include in this book What is a valid spaceship My decision was to use the Von Karmen Line
which says that a spaceship flown higher than 50 miles 80 km has entered space Using the Von Karmen Line includes one
manned device the X 15 experimental rocket plane as a spaceship although most people wouldn t think so Lastly I ve
included some notional spaceship designs which might be used to travel to Mars or other bodies in the Solar System Get this
book to keep up to date with how man has now does and plans for spaceships to travel in space *Records of the
