Statistical Analysis And Data Display:

Statistical Analysis and Data Display Richard M. Heiberger, Burt Holland, 2004-07-28 This contemporary presentation of statistical methods features extensive use of graphical displays for exploring data and for displaying the analysis. The authors demonstrate how to analyze data showing code graphics and accompanying computer listings for all the methods they cover. They emphasize how to construct and interpret graphs, discuss principles of graphical design, and show how accompanying traditional tabular results are used to confirm the visual impressions derived directly from the graphs. Many of the graphical formats are novel and appear here for the first time in print. All chapters have exercises. This book can serve as a standalone text for statistics majors at the master's level and for other quantitatively oriented disciplines at the doctoral level and as a reference book for researchers. In-depth discussions of regression analysis, analysis of variance, and design of experiments are followed by introductions to analysis of discrete bivariate data, nonparametrics, logistic regression, and ARIMA time series modeling. The authors illustrate classical concepts and techniques with a variety of case studies using both newer graphical tools and traditional tabular displays. The authors provide and discuss S Plus R and SAS executable functions and macros for all new graphical display formats. All graphs and tabular output in the book were constructed using these programs. Complete transcripts for all examples and figures are provided for readers to use as models for their own analyses. Richard M. Heiberger and Burt Holland are both Professors in the Department of Statistics at Temple University and elected Fellows of the American Statistical Association. Richard M. Heiberger participated in the design of the S Plus linear model and analysis of variance commands while on research leave at Bell Labs in 1987-88 and has been closely involved as a beta tester and user of S Plus. Burt Holland has made many research contributions to linear modeling and simultaneous statistical inference and frequently serves as a consultant to medical investigators. Both teach the Temple University course sequence that inspired them to write this text.

Heiberger, Burt Holland, 2015-12-23 This contemporary presentation of statistical methods features extensive use of graphical displays for exploring data and for displaying the analysis. The authors demonstrate how to analyze data showing code graphics and accompanying tabular listings for all the methods they cover. Complete R scripts for all examples and figures are provided for readers to use as models for their own analyses. This book can serve as a standalone text for statistics majors at the master's level and for other quantitatively oriented disciplines at the doctoral level and as a reference book for researchers. Classical concepts and techniques are illustrated with a variety of case studies using both newer graphical tools and traditional tabular displays. New graphical material includes an expanded chapter on graphics, a section on graphing Likert Scale Data to build on the importance of rating scales in fields from population studies to psychometrics, a discussion on design of graphics that will work for readers with color deficient vision, an expanded discussion on the design of multi-panel graphics, expanded and new sections in the discrete bivariate statistics chapter on the use of mosaic plots for contingency tables including the $n \times 2 \times 2$ tables.

Public Administration Research Methods Warren S. Eller, Brian J. Gerber, Scott E. Robinson, 2018-02-21

The best decisions made by public managers are based not on instinct but on an informed understanding of what is happening on the ground Policy may be directed by ideology but it must also be founded on reality The challenge of making the right decisions as a public manager is often therefore based on the need for rigorous actionable research Now in a thoughtfully revised second edition this textbook shows students of Public Administration exactly how to use both qualitative and quantitative research techniques to give them the best chance to make the right decisions Uniquely Eller Gerber and Robinson present research methodologies through a series of real life case studies with each chapter exploring situations where a public manager can use research to answer specific questions demonstrating how that research can inform future policy Taking readers through the key concepts from research design and sampling to interviews survey data and more statistical based approaches this new edition provides a complete guide to using research in the public and voluntary sectors New to this edition To better orient the student the second edition is thematically arranged Five sections each with a short essay provide not only previews of the content of each section but more importantly guide the reader through how the concepts and techniques covered relate to real world use and application A new chapter on applied quantitative analyses has been added to offer coverage of several commonly used and valuable analytic techniques for decision making for policy and management benefit cost analysis risk assessment and forecasting The second edition is accompanied by online materials containing suggested course plans and sample syllabi PowerPoint lecture slides and student support materials to illustrate the application of key concepts and analytic techniques Each chapter also includes discussion questions class exercises end of chapter review questions and key vocabulary to provide students with a range of further tools to apply research principles to practical situations
