## **Statistical Models For Optimizing Mineral Exploration:**

Statistical Models for Optimizing Mineral Exploration J.G. De Geoffroy, T.K. Wignall, 2012-12-06 After the spectacular successes of the 1960s and 1970s the mineral exploration business is at a crossroads facing uncertain times in the decades ahead This situation requires a rethinking of the philosophy guiding mineral exploration if it is to emulate its recent performance The main argument of a previous volume titled Designing Optimal Strategies for Mineral Exploration published in 1985 by Plenum Publishing Corporation of New York is that a possible answer to the challenge facing mineral explorationists lies in the philosophy of optimization This new approach should help exploration staff make the best achievable use of the sophisticated and costly technology which is presently available for the detection of ore deposits The main emphasis of the present volume is placed on the mathematical and computational aspects of the optimization of mineral exploration The seven chapters making up the main body of the book are devoted to the description and application of various types of computerized geomathematical models which underpin the optimization of the mineral exploration sequence The topics covered include a the optimal selection of ore deposit types and regions of search as well as prospecting areas within the regions Chapters 2 3 4 6 b the designing of airborne and ground field programs for the optimal coverage of prospecting areas Chapters 2 3 4 c delineation and evaluation of exploration targets within prospecting areas by means of optimized models Chapter 5

Reliability and Statistics in Geotechnical Engineering Gregory B. Baecher, John T. Christian, 2005-08-19 Risk and reliability analysis is an area of growing importance in geotechnical engineering where many variables have to be considered Statistics reliability modeling and engineering judgement are employed together to develop risk and decision analyses for civil engineering systems The resulting engineering models are used to make probabilistic predictions which are applied to geotechnical problems Reliability

Statistics in Geotechnical Engineering comprehensively covers the subject of risk and reliability in both practical and research terms Includes extensive use of case studies Presents topics not covered elsewhere spatial variability and stochastic properties of geological materials No comparable texts available Practicing engineers will find this an essential resource as will graduates in geotechnical engineering programmes *Mineral Exploration Decisions* DeVerle P. Harris,1990-03-16 A guide to economic optimization of mineral exploration decisions with detailed information on how to analyze risk and obtain a good measure of net value Presents a unified approach to the various models used by mining companies to analyze mining prospects and evaluates and compares the models Presents typical risk scenarios and shows how to apply the economic modeling process to actual situations **Technometrics** ,1990 21st Application of Computers and Operations Research in the Mineral Industry Alfred Weiss,1989 **SPE Formation Evaluation** ,1992 **Proceedings** ,1991 *Encyclopedia of Earth System Science* William Aaron Nierenberg,1992 The concept of earth system science embraces the integration of the myriad skeins of science and engineering that address the complexity of the natural system that is the earth and its surroundings Page vii *Application of Computerized Geomathematical Models to Optimization of Mineral Exploration Programs* Theodoros Petropoulos,1990 **Exploration with a Computer** William R. Green,1991 A comprehensive guide to the uses of computers in exploration where exploration means the application of scientific methods to discover unknown features of the earth s surface and crust This includes the search for new mineral and oil resources as well as such related problems as identifying geologic hazards and mapping patterns of pollution The emphasis is on the practical aspects of using computers The principles of the various exploration techniques are given only in outline to concentrate on the problems of getting information into a computer acceptable form running programs in an efficient manner and maintaining flexibility in choosing analytical methods The software to do all the tasks related to exploration data analysis is readily available so mathematical details have not been included *Progress in Cement and Concrete: pt. 1.-2. Rock,N. M. S. Rock,1988-08-10 This sourcebook to the prodigious literature on applications of computers and statistics to geology contains over 2000 references The glossary provides succinct explanations of most statistical and mathematical terms Computer topics include hardware software programming languages databases and communications graphics CAO CAM CAI GIS and expert systems Statistical topics range from elementary properties of numbers through univariate bivariate to multivariate methods The brief notes on each method provide a general guide to what the technique does and are illustrated with worked examples from a wide range of geological disciplines Students and researchers will find the book useful in coping with the explosion of information which has taken

place in geology and to make the best possible use of computers in interpreting acquired data      **Computing Risk for Oil Prospects: Principles and Programs** J.W. Harbaugh, J.C. Davis, J. Wendebourg, 1995-11-22 The petroleum industry is enduring difficult financial times because of the continuing depressed price of crude oil on the world market This has caused major corporate restructuring and reductions in staff throughout the industry Because oil exploration must now be done with fewer people under more difficult economic constraints it is essential that the most effective and efficient procedures be used Computing Risk for Oil Prospects describes how prospect risk assessment predicting the distribution of financial gains or losses that may result from the drilling of an exploration well can be done using objective procedures implemented on personal computers The procedures include analyses of historical data interpretation of geological and geophysical data and financial calculations to yield a spectrum of the possible consequences of decisions All aspects of petroleum risk assessment are covered from evaluating regional resources through delineating an individual prospect to calculation of the financial consequences of alternative decisions and their possible results The bottom lines are given both in terms of the probable volumes of oil that may be discovered and the expected monetary returns Statistical procedures are linked with computer mapping and interpretation algorithms which feed their results directly into routines for financial analysis The programs in the included library of computer programs are tailored to fit seamlessly together and are designed for ease and simplicity of operation The two diskettes supplied are IBM compatible Full information on loading is given in Appendix A Software Installation Risk I diskette contains data files and executables and Risk 2 diskette contains only executables The authors contend that the explorationist who develops a prospect should be involved in every facet of its analysis including risk and financial assessments This book provides the tools necessary for these tasks      *Quarterly Bulletin of the Canadian Mining Institute* Canadian Institute of Mining and Metallurgy, Canadian Mining Institute, 1976      *California Geology* ,1988
