Kleijnen,2015-07-01 This is a new edition of Kleijnen s advanced expository book on statistical methods for the Design and  
Analysis of Simulation Experiments DASE Altogether this new edition has approximately 50% new material not in the original  
book More specifically the author has made significant changes to the book s organization including placing the chapter on  
Screening Designs immediately after the chapters on Classic Designs and reversing the order of the chapters on Simulation  
Optimization and Kriging Metamodels The latter two chapters reflect how active the research has been in these areas The  
validation section has been moved into the chapter on Classic Assumptions versus Simulation Practice and the chapter on  
Screening now has a section on selecting the number of replications in sequential bifurcation through Wald s sequential  
probability ration test as well as a section on sequential bifurcation for multiple types of simulation responses Whereas all  
references in the original edition were placed at the end of the book in this edition references are placed at the end of each  
chapter From Reviews of the First Edition Jack Kleijnen has once again produced a cutting edge approach to the design and
