Variabelen

Variabelen: grootheden (aspecten van subjecten, processen of verschijnselen) die verschillende uitkomsten kunnen hebben voor verschillende subjecten of voor dezelfde subjecten op verschillende momenten in de tijd

- Univariate analyse: een enkele variabele (lengte)
- Bivariate analyse: twee variabelen (lengte, gewicht)
- Multivariate analyse: meer variabelen (lengte, gewicht, geslacht)

Meetniveaus

De term 'meetniveau' is een verwijzing naar de attribuut informatie (ordening, afstand, nulpunt), die aan de uitkomsten van variabelen verbonden is.

Verskillende meetniveaus van variabelen:

1. Kwalitatieve meetniveaus:

- Nominaal (geslacht, naam bedrijf land, etc.) naamgeving
- Ordinaal (functieniveau, preferentie, etc.) ordeningsinterpretatie

2. Kwantitatieve meetniveaus:

- Interval (temperatuur, beloningsverschil, etc.) afstandsinterpretatie
- Ratio (temperatuur Kelvin, lengte, salaris, etc.) er is een absoluut nulpunt aanwezig

Figuur 1: meetniveaus

Degenereren: variabelen behandelen als gemeten op lager meetniveau; vrijwel altijd mogelijk

Sampling of Powders and Bulk Materials Karl Sommer, 2012-12-06 The present book is based on the experience of sampling powders and bulk materials at institute of Mechanische Verfahrens technik Karlsruhe University Germany sampling is understood to be the taking of samples from a material in order to obtain information about the composition of the total amount in respect of one or more attributes such as metal content ash content moisture particle size particle shape etc In the case of granular bulk material already comminuted or not samples from tubs trucks bags or barrels As granular material has a strong tendency to segregate portions must be removed from these containers at many places The book describes the basic theory behind sampling materials in powder or granular form In addition to providing fundamental statistical data it also highlights the mistakes that can arise in the different types of sampling techniques such as suspensions pellet cross sections sample dividing or sampling according to number or weight If

the samples contain individual particles comparable in size to the size of the sample itself then in addition to the number of individual elements in the sample and the type of sampling the particle size and particle size distribution will be further variables This book will pay special attention to this fact important for the whole of powder technology the chemical pharmaceutical food and and for mineral processing industry [2012](#) ,2013-03-01 Particularly in the humanities and social sciences festschrifts are a popular forum for discussion The IJBF provides quick and easy general access to these important resources for scholars and students The festschrifts are located in state and regional libraries and their bibliographic details are recorded Since 1983 more than 659 000 articles from more than 30 500 festschrifts published between 1977 and 2011 have been catalogued
