

WHEAT MILLING

- Cereal processing is a multiplex operation containing series of unit operations to convert cereals into easily digestible and consumable products such as flour, dhal, grits, or any further processed products.
- The objective of wheat milling is to grind cleaned and tempered wheat by separating the outer husk from the internal endosperm. Recent technology of wheat milling involves metal cylinders or rollers for milling purposes.
- The wheat milling process involves separating the wheat grain into three constituents - germ, bran, and endosperm. It is a complex and intricate process.
- Hard wheat flours provide for a variety of bread products; durum semolina and flour are used in pasta. A blend of soft and hard wheats produce Asian noodles. Soft wheats produce an array of crackers, cookies, cereals, cakes, pancakes, breadings, and pastries.
