Isogeometric Analysis and Applications 2014 Bert Jüttler, Bernd Simeon, 2015-12-21 Isogeometric Analysis is a groundbreaking computational approach that promises the possibility of integrating the finite element method into conventional spline based CAD design tools It thus bridges the gap between numerical analysis and geometry and

moreover it allows to tackle new cutting edge applications at the frontiers of research in science and engineering This proceedings volume contains a selection of outstanding research papers presented at the second International Workshop on Isogeometric Analysis and Applications held at Annweiler Germany in April 2014 **Approximation Theory XVI** Gregory E. Fasshauer, Marian Neamtu, Larry L. Schumaker, 2021-01-04 These proceedings are based on the international conference Approximation Theory XVI held on May 19 22 2019 in Nashville Tennessee The conference was the sixteenth in a series of meetings in Approximation Theory held at various locations in the United States Over 130 mathematicians from 20 countries attended The book contains two longer survey papers on nonstationary subdivision and Prony's method along with 11 research papers on a variety of topics in approximation theory including Balian Low theorems butterfly spline interpolation cubature rules Hankel and Toeplitz matrices phase retrieval positive definite kernels quasi interpolation operators stochastic collocation the gradient conjecture time variant systems and trivariate finite elements The book should be of interest to mathematicians engineers and computer scientists working in approximation theory computer aided geometric design numerical analysis and related approximation areas **MICCAI 2005** James Duncan, 2005-10-11 The two volume set LNCS 3749 and LNCS 3750 constitutes the refereed proceedings of the 8th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2005 held in Palm Springs CA USA in October 2005 Based on rigorous peer reviews the program committee selected 237 carefully revised full papers from 632 submissions for presentation in two volumes The first volume includes all the contributions related to image analysis and validation vascular image segmentation image registration diffusion tensor image analysis image segmentation and analysis clinical applications validation imaging systems visualization computer assisted diagnosis cellular and molecular image analysis physically based modeling robotics and intervention medical image computing for clinical applications and biological imaging simulation and modeling The second volume collects the papers related to robotics image guided surgery and interventions image registration medical image computing structural and functional brain analysis model based image analysis image guided intervention simulation modeling and display and image segmentation and analysis **Medical Image Computing and Computer-Assisted Intervention - MICCAI 2005** James Duncan, 2005-09-27 **Advances in Geometric Modeling** Muhammad Sarfraz, 2003 Based on the new idea of gathering state of the art topics in Geometric Modeling together with techniques applications systems and tools The first book of its kind in that it incorporates several topics providing a class of practical solutions to problems in mathematical engineering and physical sciences Provides a valuable resource focusing on interdisciplinary methods and affiliate research in the area **3D Object Processing** Jean-Luc Dugelay, Atilla Baskurt, Mohamed Daoudi, 2008-06-03 The arrival and continuing evolution of high quality 3D objects has been made possible by recent progress in 3D scanner acquisition and 3D graphics rendering With this increasing quality comes a corresponding increase in the size and complexity of the data files and the necessity for advances in compression techniques Effective indexing to

facilitate the retrieval of the 3D data is then required to efficiently store search and recapture the objects that have been compressed. The application of 3D images in fields such as communications, medicine and the military also calls for copyright protection or watermarking to secure the data for transmission. Written by expert contributors, this timely text brings together the three important and complementary topics of compression, retrieval and watermarking techniques for 3D objects. 3D object processing applications are developing rapidly and this book tackles the challenges and opportunities presented, focusing on the secure transmission, sharing and searching of 3D objects on networks and includes an introduction to the commonly used 3D representation schemes, the characteristics, advantages and limitations of polygonal meshes, surface based models and volumetric models. 3D compression techniques, the 3D coding and decoding schemes for reducing the size of 3D data to reduce transmission time and minimize distortion, state of the art responses to the intrinsic challenges of building a 3D model search engine, considering view based structural and full 3D approaches, watermarking techniques for ensuring intellectual property protection and content security without altering the visual quality of the 3D object. **3D Object Processing: Compression, Indexing and Watermarking** is an invaluable resource for graduate students and researchers working in signal and image processing, computer aided design, animation and imaging systems. Practising engineers who want to expand their knowledge of 3D video objects, including data compression, indexing, security and copyrighting of information, will also find this book of great use.
