Subtraction 0 To 10:

Subtraction Within 0-10 Maria Miller, 2016-01-01 Subtraction within 0 10 deals with various concepts related to basic subtraction Most of the problems in the workbook only use numbers up to 10 but a few include numbers between 10 and 20 The concept of subtraction is easy to illustrate with the idea of taking away If your child does not yet know the word minus it is a good idea to introduce it first orally Simply use blocks rocks or other concrete objects For example show the child eight blocks and take away three blocks Then use both kinds of wordings Eight blocks take away three blocks leaves five blocks Eight blocks minus three blocks equals five blocks Play with the blocks or other concrete objects until the child can use the words minus and equals in his her own speech This will make it much easier to introduce the actual written symbols The next step would be to abandon concrete objects and use semi concrete illustrations or pictures That is where this workbook starts with the lesson Subtraction Is Taking Away At this stage the child can still figure out the subtraction problems by simply counting how many objects are left So how does the student learn how to subtract without actually counting concrete objects or pictures As a transitional strategy we will study counting down the student solves $9 - 3$ for example by counting down three steps from nine eight seven six So the answer is six However the final goal is to learn to use the addition facts to find the answer to subtraction problems For example once the student knows that $5 + 5 = 10$ then this fact is used to solve $10 - 5 = 5$ For this purpose the student must learn well the connection between addition and subtraction This is why this book concentrates heavily on the connection between addition and subtraction with several lessons ending up with the concept of fact families Besides taking away subtraction is also used for these two situations Finding how much more one number is than another Note that no one takes away anything in this situation For example if you have 3 dollars and you need 6 dollars how many more dollars do you need The student is instructed to write a how many more addition problem for this which looks like this $3 + \underline{\quad} = 6$ We also call these problems missing addend problems It can be solved by remembering the addition fact $3 + 3 = 6$ or by subtracting $6 - 3 = 3$ Two or more parts of something make up a whole If you know the whole and one of its parts you can figure out the other part For example if there are 10 white and red flowers and seven of them are white how many are red We know the parts the red and white flowers add up to 10 so we write an addition $7 + \underline{\quad} = 10$ Again this can be solved by subtracting or simply by knowing the addition fact $7 + 3 = 10$ These two situations are dealt with in several lessons in the workbook and are found in various word problems throughout the book Besides the exercises in the lessons I encourage you to use games that are explained on the next page Children like to play and using the addition and subtraction facts in a game gives them fun and education in the same package
