Successful Chess:

The Greatest Attacker in Chess Cyrus Lakdawala, 2022-01-22 Rashid Nezhmetdinov 1912-1974 played fearless attacking chess. With his dazzling style, the Soviet master already was a legend during his lifetime, but international fame largely eluded him. Only once did he get permission to show his exceptional talent in a tournament abroad. Five times Nezhmetdinov was chess champion of the Russian Federation. In the 1961 Soviet Championship, he won the Best Game prize for a spectacular win against Mikhail Tal, who praised his opponent for his amazing creativity. Other stars that Nezh defeated in grand style included Spassky, Polugaevsky, Bronstein, and Geller. His games, full of tactical pyrotechnics, are his legacy and have reached an ever-growing audience. Nezhmetdinov's shocking strategic queen sacrifice in 1962 against Chernikov, as shown on Agadmator's YouTube channel, has become the best-watched chess video of all time with millions of views. In this book, Cyrus Lakdawala pays tribute to the genius of the enigmatic Nezhmetdinov, a Tatar who grew up as an orphan in the part of the Soviet Union that is now Kazakhstan. In more than one hundred impressive and instructive games and positions, Lakdawala shows how Nezhmetdinov fought for the initiative, how he bluffed and sacrificed, and how he kept his cool to out-calculate his opponents. Lakdawala's lucid writing perfectly matches the power of Nezh's moves. This wonderful collection celebrates Nezhmetdinov as the Greatest Attacker in Chess. *Mastering Chess Strategy and Tactics* Barrett

Gilhooly, 2012-12-06 Problem solving is a central topic for both cognitive psychology and artificial intelligence AI Psychology seeks to analyze naturally occurring problem solving into hypothetical processes while AI seeks to synthesize problem solving performance from well defined processes Psychology may suggest possible processes to AI and in turn AI may suggest plausible hypotheses to psychology It should be useful for both sides to have some idea of the other's contribution hence this book which brings together overviews of psychological and AI research in major areas of problem solving At a more general level this book is intended to be a contribution toward comparative cognitive science Cognitive science is the study of intelligent systems whether natural or artificial and treats both organisms and computers as types of information processing systems Clearly humans and typical current computers have rather different functional or cognitive architectures Thus insights into the role of cognitive architecture in performance may be gained by comparing typical human problem solving with efficient machine problem solving over a range of tasks Readers may notice that there is little mention of connectionist approaches in this volume This is because at the time of writing such approaches have had little or no impact on research at the problem solving level Should a similar volume be produced in ten years or so of course a very different story may need to be told **The City of London chess magazine, ed. by W.N.
