Philosophical Foundations for the Curriculum Allen Brent,2016-09-19 In this book first published in 1978 Allen Brent sets out to explore some of the questions raised by theorists and philosophers regarding curriculum He starts by investigating whether all knowledge is the product of social conditions of particular times or places or whether there is some kind of universal framework implicit in the claims to knowledge which men make He looks at the work of Plato Newman Freire and Hirt and how each of them in a strikingly different way they have tried to give us an objective basis for curriculum judgements and how the validity of that basis is attacked by contemporary sociologists of knowledge This book is aimed

primarily at students who are concentrating on the philosophy of education or curriculum theory

Egypt, Energy and the Environment Tarek H. Selim, 2009-07-31 Pure environmentalism and pure resource exploitation can be integrated together to form an encompassing sustainability solution This is the main message of this book based on an innovative structure concentration incentives methodology applied to Egypt This methodology provides a basis for achieving environmental sustainability based on endogenous source driven forces of change in contrast to the traditional effects dominant oriented approach Though the book s methodology could be used as a framework of analysis in environmental sustainability research for any developing country Egypt provides a rich case study because of its historical socio economic and political constructs Sustainable development is generally seen as a tradeoff between resource efficiency and social equity such that total resource essentials in society can become sustainable in the long run in a manner that meets the needs of current generations without compromising the ability of future generations to meet their own needs Environmental sustainability cannot be implemented without the direct inclusion of structure form concentration effect and incentives drivers as critical policy choices because 1 they constitute a necessary condition in any country s path towards sustainable development 2 they must be implemented simultaneously as a target and constraint and 3 they require social and political sacrifice complemented by endogenous based systems in contrast to authoritarian solutions Egypt Energy and the Environment presents research on Egypt s energy and environmental resources from multidisciplinary perspectives It offers sustainability solutions to many of the country s problems relating to energy pollution water gender wildlife politics economics management ecology and information technology The book s method of analysis can be applied to other developing countries as well
