The Blood Of Sheep Composition And Function:

The Blood of Sheep M.H. Blunt, 2012-12-06 The purpose of this monograph is to bring together in one volume some of the more recent knowledge of the cellular and biochemical constituents of sheep's blood. Limitations of the space available have precluded a complete discussion but a number of good reviews have been published within the last few years on certain specific aspects and these have been referred to in the extensive bibliography. There is inevitably some overlap in the material discussed arising from duplication of interest and from the close association of the subject matter. The authors were asked to discuss normal values and the changes brought about in these by physiological stresses particularly those imposed by pregnancy, age, lactation and changing nutrition. In some cases where it was considered suitable the response to certain pathological conditions have also been discussed. It is hoped that the monograph will be of value to those using sheep in comparative research into veterinary and human medicine as well as to students of ruminant physiology.
