Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1978 *Actor Training* Alison Hodge, 2010-01-29 Presents an introduction to how actor training shapes modern theatre **Bernard Shaw, Director** Bernard F. Dukore, 2025-10-03 You see madam Bernard Shaw once wrote I am not a dreamer who doesn't understand the practical exigencies of the stage The remark was an understatement Shaw not only understood the practical aspects of play production he had a great deal of experience with them as well For thirty years following the 1894 production of *Arms and the Man* which he directed Shaw staged virtually every production of his own plays in London Directing plays he consistently maintained is as crucial a part of a playwright's profession as writing them and the author he believed is the most desirable director of his own play Originally published in 1971 this first full length treatment of Shaw as director is important for several reasons first because Shaw was one of the few major playwrights who frequently directed his own works second because he was a good director and third because he is an early example of the modern idea of the director as guiding artist in the production of a play After an initial chapter examining Shaw's background and experiences in the theatre before he began to direct plays Dukore explores various aspects of Shawian directorial theory and practice He shows that while Shaw's basic concern was with the actor he was also involved in all the minute considerations that make up a successful production including pre rehearsal planning casting cutting and changing the script though Shaw forbade other directors to cut his plays he himself did so conducting rehearsals acting scenery lighting and costuming Throughout his analysis the author makes use of previously unpublished material particularly Shaw's rehearsal notes written in the auditorium when he staged his plays and letters to actors This is a readable book essential for anyone interested in Bernard Shaw's plays **Agent**

Reinforcement Learning for Sequential Decision and Optimal Control Shengbo Eben Li,2023-04-05 Have you ever wondered how AlphaZero learns to defeat the top human Go players Do you have any clues about how an autonomous driving system can gradually develop self driving skills beyond normal drivers What is the key that enables AlphaStar to make decisions in Starcraft a notoriously difficult strategy game that has partial information and complex rules The core mechanism underlying those recent technical breakthroughs is reinforcement learning RL a theory that can help an agent to develop the self evolution ability through continuing environment interactions In the past few years the AI community has witnessed phenomenal success of reinforcement learning in various fields including chess games computer games and robotic control RL is also considered to be a promising and powerful tool to create general artificial intelligence in the future As an interdisciplinary field of trial and error learning and optimal control RL resembles how humans reinforce their intelligence by interacting with the environment and provides a principled solution for sequential decision making and optimal control in large scale and complex problems Since RL contains a wide range of new concepts and theories scholars may be plagued by a number of questions What is the inherent mechanism of reinforcement learning What is the internal connection between RL and optimal control How has RL evolved in the past few decades and what are the milestones How do we choose and implement practical and effective RL algorithms for real world scenarios What are the key challenges that RL faces today and how can we solve them What is the current trend of RL research You can find answers to all those questions in this book The purpose of the book is to help researchers and practitioners take a comprehensive view of RL and understand the in depth connection between RL and optimal control The book includes not only systematic and thorough explanations of theoretical basics but also methodical guidance of practical algorithm implementations The book intends to

provide a comprehensive coverage of both classic theories and recent achievements and the content is carefully and logically organized including basic topics such as the main concepts and terminologies of RL Markov decision process MDP Bellman s optimality condition Monte Carlo learning temporal difference learning stochastic dynamic programming function approximation policy gradient methods approximate dynamic programming and deep RL as well as the latest advances in action and state constraints safety guarantee reference harmonization robust RL partially observable MDP multiagent RL inverse RL offline RL and so on
