**Top-Down Calculus** S. Gill Williamson,1987-01-01      **Top-down Calculus** Stanley Gill Williamson,1987 This textbook was designed for a first course in differential and integral calculus and is directed toward students in engineering the sciences mathematics and computer science Its major goal is to bring students to a level of technical competence and intuitive understanding of calculus that is adequate for applying the subject to real world problems The text contains major sections on 1 linear functions and derivatives 2 computing derivatives 3 applications of derivatives 4 integrals and 5 infinite series The activities contained within these chapters are designed so that students can first study the exercise set and the solutions Next the students are asked to make modifications to the original problem solve it and move on to the variations The appendices include math tables additional reading and exercises solutions and hints to the exercises TW      **Relevancy Based Use of Lemmas in Connection Tableau Calculi** Marc Fuchs,1999 Automated deduction is a fundamental research area in the field of artificial intelligence The aim of an automated deduction system is to find a formal proof for a given goal based on given axioms Essentially automated deduction can be viewed as a search problem which spans huge search spaces One main thrust of research in automated deduction is the development of techniques for achieving a reduction of the search space A particularly promising approach for search space reduction relies on the integration of top down and bottom up reasoning A possible approach employs bottom up generated lemmas in top down systems Lemma use offers the possibility to shorten proofs and to overcome weaknesses of top down systems like poor redundancy control In spite of the possible advantages of lemma use however naive approaches for lemma integration even tend to slow down top down systems The main problem is the increased indeterminism in the search process In this thesis important contributions for a successful application of lemmas in top down deduction systems based on connection tableau calculi are made New methods for lemma generation and for the estimation of the relevancy of lemmas are developed As a practical contribution the implementation of the new techniques leads to a powerful system for automated deduction which demonstrates the high potential of the new techniques      **Cooperation in Heterogeneous Theorem Prover Networks** Dirk Fuchs,2000      *Advances in Petri Nets 1993* Grzegorz Rozenberg,1993-05-27 The main aims of the series of volumes *Advances in Petri Nets* are to present to the outside scientific community a fair picture of recent advances in the area of Petri nets and to encourage those interested in the applications and the theory of concurrent systems to take a closer look at Petri nets and then join the group of researchers working in this fascinating and challenging area This volume is based on the proceedings of the 12th International Conference on Applications and Theory of Petri Nets held in Gjern Denmark in June 1991 It contains 18 selected and revised papers covering all aspects of recent Petri net research      Computer Science Logic European Association for Computer Science Logic. **Deep Inference and Symmetry in Classical Proofs** Kai Brännler, 2004 In this thesis we see deductive systems for classical propositional and predicate logic which use deep inference i e inference rules apply arbitrarily deep inside formulas and a certain symmetry which provides an involution on derivations Like sequent systems they have a cut rule which is admissible Unlike sequent systems they enjoy various new interesting properties Not only the identity axiom but also cut weakening and even contraction are reducible to atomic form This leads to inference rules that are local meaning that the effort of applying them is bounded and finitely generating meaning that given a conclusion there is only a finite number of premises to choose from The systems also enjoy new normal forms for derivations and in the propositional case a cut elimination procedure that is drastically simpler than the ones for sequent systems
