Topics In Probability And Lie Groups Boundary Theory:

Topics in Probability and Lie Groups John Christopher Taylor, This volume is comprised of two parts the first contains articles by S N Evans F Ledrappier and Figa Talamanca These articles arose from a Centre de Recherches de Mathematiques CRM seminar entitled Topics in Probability on Lie Groups Boundary Theory Evans gives a synthesis of his pre 1992 work on Gaussian measures on vector spaces over a local field Ledrappier uses the freegroup on d generators as a paradigm for results on the asymptotic properties of random walks and harmonic measures on the Martin boundary These articles are followed by a case study by Figa Talamanca using Gelfand pairs to study a diffusion on a compact ultrametric space The second part of the book is an appendix to the book Compactifications of Symmetric Spaces Birkhauser by Y Guivarc h and J C Taylor This appendix consists of an article by each author and presents the contents of this book in a more algebraic way L Ji and J P Anker simplifies some of their results on the asymptotics of the Green function that were used to compute Martin boundaries And Taylor gives a self contained account of Martin boundary theory for manifolds using the theory of second order strictly elliptic partial differential operators

Topics in Probability and Lie Groups: Boundary Theory John Christopher Taylor, 2001 This volume is comprised of two parts the first contains articles by S N Evans F Ledrappier and Figa Talamanca These articles arose from a Centre de Recherches de Mathematiques CRM seminar entitled Topics in Probability on Lie Groups Boundary Theory Evans gives a synthesis of his pre 1992 work on Gaussian measures on vector spaces over a local field Ledrappier uses the freegroup on d generators as a paradigm for results on the asymptotic properties of random walks and harmonic measures on the Martin boundary These articles are followed by a case study by Figa Talamanca using Gelfand pairs to study a diffusion on a compact ultrametric space The second part of the book is an appendix to the book Compactifications of Symmetric Spaces Birkhauser by Y Guivarc h and J C Taylor This appendix consists of an article by each author and presents the contents of this book in a more algebraic way L Ji and J P Anker simplifies some of their results on the asymptotics of the Green function that were used to compute Martin boundaries And Taylor gives a self contained account of Martin boundary theory for manifolds using the theory of second order strictly elliptic partial differential operators

Ischia Group Theory 2008 - Proceedings Of The Conference In Group Theory Mariagrazia Bianchi, Patrizia Longobardi, Mercede Maj, Carlo Maria Scoppola, 2009-07-30 The volume contains a collection of research articles by leading experts in group theory and reports of several accessible surveys of recent research in the area The compilation provide an overview of the diversity of themes and applications that interest today s group theorists The topics covered in this volume include character theory combinatorial group theory varieties of groups conjugacy classes profinite groups graphs connected with groups subgroup structure representation theory

Invariant Theory in All Characteristics Harold Edward Alexander Eddy Campbell, David L. Wehlau, This volume includes the proceedings of a workshop on Invariant Theory held at Queen s University Ontario The workshop was part of the theme year held under the

auspices of the Centre de recherches mathématiques CRM in Montreal The gathering brought together two communities of researchers those working in characteristic 0 and those working in positive characteristic The book contains three types of papers survey articles providing introductions to computational invariant theory modular invariant theory of finite groups and the invariant theory of Lie groups expository works recounting recent research in these three areas and beyond and open problems of current interest The book is suitable for graduate students and researchers working in invariant theory

Complex Analysis and Potential Theory Andre Boivin, Javad Mashreghi, 2012 This is the proceedings volume of an international conference entitled Complex Analysis and Potential Theory which was held to honor the important contributions of two influential analysts Kohur N Gowri Sankaran and Paul M Gauthier in June 2011 at the Centre de Recherches Mathématiques CRM in Montreal More than fifty mathematicians from fifteen countries participated in the conference The twenty four surveys and research articles contained in this book are based on the lectures given by some of the most established specialists in the fields They reflect the wide breadth of research interests of the two honorees from potential theory on trees to approximation on Riemann surfaces from universality to inner and outer functions and the disc algebra from branching processes to harmonic extension and capacities from harmonic mappings and the Harnack principle to integration formulae in \mathbb{C}^n and the Hartogs phenomenon from fine harmonicity and plurisubharmonic functions to the binomial identity and the Riemann hypothesis and more This volume will be a valuable resource for specialists young researchers and graduate students from both fields complex analysis and potential theory It will foster further cooperation and the exchange of ideas and techniques to find new research perspectives

Random Walks on Reductive Groups Yves Benoist, Jean-François Quint, 2016-10-20 The classical theory of random walks describes the asymptotic behavior of sums of independent identically distributed random real variables This book explains the generalization of this theory to products of independent identically distributed random matrices with real coefficients Under the assumption that the action of the matrices is semisimple or equivalently that the Zariski closure of the group generated by these matrices is reductive and under suitable moment assumptions it is shown that the norm of the products of such random matrices satisfies a number of classical probabilistic laws This book includes necessary background on the theory of reductive algebraic groups probability theory and operator theory thereby providing a modern introduction to the topic

Mathematics and Computer Science III Michael Drmota, Philippe Flajolet, Danièle Gardy, Bernhard Gittenberger, 2004-07-23 Mathematics and Computer Science III contains invited and contributed papers on combinatorics random graphs and networks algorithms analysis and trees branching processes constituting the Proceedings of the Third International Colloquium on Mathematics and Computer Science held in Vienna in September 2004 It addresses a large public in applied mathematics discrete mathematics and computer science including researchers teachers graduate students and engineers
