Khenkin,2012-12-06 In this part we present a survey of mean periodicity phenomena which arise in connection with classical questions in complex analysis partial differential equations and more generally convolution equations A common feature of the problem we shall consider is the fact that their solutions depend on tech niques and ideas from complex analysis One finds in this way a remarkable and fruitful interplay between mean periodicity and complex analysis This is exactly what this part will try to explore It is probably appropriate to stress the classical flavor of all of our treat ment Even though we shall frequently refer to recent results and the latest theories such as algebmic analysis or the theory of Bernstein Sato polyno mials it is important to observe that the roots of probably all the problems we discuss here are classical in spirit since that is the approach we use For instance most of Chap 2 is devoted to far reaching generalizations of a result dating back to Euler

and it is soon discovered that the key tool for such gen eralizations was first introduced by Jacobi As the reader will soon discover similar arguments can be made for each of the subsequent chapters Before we give a complete description of our work on a chapter by chapter basis let us make a remark about the list of references It is quite hard maybe even impossible to provide a complete list of references on such a vast topic   Differential Geometry and Mathematical Physics Gerd Rudolph,Matthias Schmidt,2018-05-09 The book is devoted to the study of the geometrical and topological structure of gauge theories It consists of the following three building blocks Geometry and topology of fibre bundles Clifford algebras spin structures and Dirac operators Gauge theory Written in the style of a mathematical textbook it combines a comprehensive presentation of the mathematical foundations with a discussion of a variety of advanced topics in gauge theory The first building block includes a number of specific topics like invariant connections universal connections H structures and the Postnikov approximation of classifying spaces Given the great importance of Dirac operators in gauge theory a complete proof of the Atiyah Singer Index Theorem is presented The gauge theory part contains the study of Yang Mills equations including the theory of instantons and the classical stability analysis the discussion of various models with matter fields including magnetic monopoles the Seiberg Witten model and dimensional reduction and the investigation of the structure of the gauge orbit space The final chapter is devoted to elements of quantum gauge theory including the discussion of the Gribov problem anomalies and the implementation of the non generic gauge orbit strata in the framework of Hamiltonian lattice gauge theory The book is addressed both to physicists and mathematicians It is intended to be accessible to students starting from a graduate level
