The Biotechnology Revolution:

Liberation Biology Ronald Bailey, 2013-08 The 21st century will undoubtedly witness unprecedented advances in understanding the mechanisms of the human body and in developing biotechnology With the mapping of the human genome the pace of discovery is now on the fast track By the middle of the century we can expect that the rapid progress in biology and biotechnology will utterly transform human life What was once the stuff of science fiction may now be within reach in the not too distant future 20 to 40 year leaps in average life spans enhanced human bodies drugs and therapies to boost memory and speed up mental processing and a genetic science that allows parents to ensure that their children will have stronger immune systems more athletic bodies and cleverer brains Even the prospect of human immortality beckons Such scenarios excite many people and frighten or appall many others Already biotechnology opponents are organizing political movements aimed at restricting scientific research banning the development and commercialization of various products and technologies and limiting citizens access to the fruits of the biotech revolution In this forward looking book Ronald Bailey science writer for Reason magazine argues that the coming biotechnology revolution far from endangering human dignity will liberate human beings to achieve their full potentials by enabling more of us to live flourishing lives free of disease disability and the threat of early death Bailey covers the full range of the coming biotechnology breakthroughs from stem cell research to third world farming from brain enhancing neuropharmaceuticals to designer babies Against critics of these trends who forecast the nightmare society of Huxley's Brave New World Bailey persuasively shows in lucid and well argued prose that the health safety and ethical concerns raised by worried citizens and policymakers are misplaced Liberation Biology makes a positive optimistic and convincing case that the biotechnology revolution will improve our lives and the future of our children while preserving and enhancing the natural environment

Old Plagues, New Threats Rita Grossman-Vermaas, Brian D. Finlay, Elizabeth Turpen, Henry L. Stimson Center, 2008-04 The benefits of biotechnology have brought unprecedented advances in global development In many ways the world is a better place to live than it has ever been life expectancy has doubled in the past 100 years the technology driven revolution has created astonishing new capabilities to diagnose and treat illnesses and new technologies are being applied to bolster food production across the developing world The benefits of biotechnology have brought unprecedented advances in global development But a formidable challenge of globalization is governments inability to effectively monitor and regulate these emerging technologies and the increasing commitment and wherewithal of non state actors to use these advances for hostile purposes This report uses as a case study industry s growing interest in dangerous pathogens and toxins as therapeutic pharmaceuticals It illustrates the full life cycle of threats and opportunities from research to distribution to injection into patient of products derived from select agents

The Frankenfood Myth Henry Miller, Gregory Conko, 2004-08-30 Few topics have inspired as much international furor and misinformation as the development and distribution of genetically altered foods For thousands of years farmers have bred crops for their resistance to disease productivity and nutritional value and over the past century scientists have used increasingly more sophisticated methods for modifying them at the genetic level But only since the 1970s have advances in biotechnology or gene splicing to be more precise upped the ante with the promise of dramatically improved agricultural products and public resistance far out of synch with the potential risks In this provocative and meticulously researched book Henry Miller and Gregory Conko trace the origins of gene splicing its applications and the backlash from consumer groups and government agencies against so called Frankenfoods from America to Zimbabwe They explain how a happy conspiracy of anti technology activism bureaucratic over reach and business lobbying has resulted in a regulatory framework in which there is an inverse relationship between the degree of product risk and degree of regulatory scrutiny The net result they argue is a combination of public confusion political manipulation ill conceived regulation from such agencies as the USDA EPA and FDA and ultimately the obstruction of one of the safest and most promising technologies ever developed with profoundly negative consequences for the environment and starving people around the world The authors go on to suggest a way to emerge from this morass proposing a variety of business and policy reforms that can unlock the potential of this cutting edge science while ensuring appropriate safeguards and moving environmentally friendly products into the hands of farmers and consumers This book is guaranteed to fuel the ongoing debate over the future of biotech and its cultural economic and political implications
