The Boundaries Of Natural Science:

Boundaries of Natural Science Rudolf Steiner, 1987-06 Translated by Frederick Amrine and Konrad Oberhuber from shorthand reports unrevised by the lecturer from the 4th edition 1969 of the German text published under the title Grenzen der Naturerkenntnis Vol 322 in the Bibliographic survey Copyright page **Anthroposophy and the Natural Sciences** Rudolf Steiner, 2021-10-19 5 public lectures and an evening discussion various cities June 17 1920 May 11 1922 CW 75 This previously untranslated volume in The Collected Works of Rudolf Steiner showcases Rudolf Steiner presenting the key concepts and methods of spiritual science to more or less skeptical academic audiences in the early 1920s Step by step he presented to his listeners the fundamentals of the anthroposophic path of knowledge Steiner was less concerned with presenting results from his spiritual scientific research than with leading his academic audience to an objective understanding of spiritual science in a propaedeutic conceptually transparent way The central questions of his approach were What are the tools and instruments required to orient oneself in the world of the soul and the spirit How can we know that the spiritual world is an objective world and not merely a psychic projection What authorizes the spiritual researcher to acknowledge what he has experienced on the other side as a reality that is independent of him Rudolf Steiner addresses these and other questions in such a structured and readily comprehensible way that the volume as a whole is well suited both as an introductory text and as a means for anyone to deepen their understanding of how anthroposophy relates to and builds upon the natural sciences At the time these presentations were given serious voices had been raised denying Steiner's scientific credibility and denouncing his methods as unsound Partly in response to such criticisms Steiner here describes a means by which human beings can gain through methodical and rigorous training a direct experience of the spiritual dimension of life He lays out the methodology of spiritual science which is rooted in the scientific approach outlining the three stages of higher knowledge imagination inspiration and intuition and describing the inner processes that lead from intellectual thinking to these higher modes of cognition Ultimately what Steiner proposes is not a deviation from the natural sciences but their expansion and development beyond unnecessary boundaries that is the establishment of anthroposophical spiritual science as a recognized method and practice of scientific research This book is a translation from German of Das Verh ltnis der Anthroposophie zur Naturwissenschaft 1st edition GA 75 Rudolf Steiner Verlag Dornach Switzerland 2010

Kant's Metaphysical Foundations of Natural Science Michael Bennett McNulty, 2022-08-11 In his Metaphysical Foundations of Natural Science 1786 Kant accounts for the possibility of an acting at a distance gravitational force demonstrates the infinite divisibility of matter and derives analogues to Newtonian laws of motion The work is his major statement in philosophy of science and was especially influential in German speaking countries in the nineteenth century However this complex text has not received the scholarly attention it deserves The chapters of this Critical Guide clarify the accounts of matter motion the mathematization of nature space and natural laws exhibited in the Metaphysical Foundations

elucidate the relationship between its metaphysics of nature and Kant's critical philosophy and describe the historical context for Kant's account of natural science. The volume will be an invaluable resource for understanding one of Kant's most difficult works and will set the agenda for future scholarship on Kant's philosophy of science.

Soviet Marxism and Natural Science David Joravsky, 2013-04-15 Originally published in 1961. Russian Marxist philosophy of science originated among men and women who gave their whole lives to rebellion against established authority. The original tension within Marxist philosophy between positivism and metaphysics was repressed but not resolved in this first phase of Soviet Marxism. In this volume the author correlates the development of ideas with trends in the Cultural Revolution and against this background it is possible to understand why debates over general philosophy gave way to conflicts over specific sciences in the aftermath of the first Five Year Plan and why there was a genuine crisis in Soviet biology.

Mathematics and the Natural Sciences Francis Bailly, Giuseppe Longo, 2011. The book aims at the identification of the organising concepts of some physical and biological phenomena by means of an analysis of the foundations of mathematics and of physics. This is done in the perspective of unifying phenomena of bringing different conceptual universes into dialog. The analysis of the role of order and of symmetries in the foundations of mathematics is linked to the main invariants and principles among which the geodesic principle a consequence of symmetries which govern and confer unity to the various physical theories. Moreover we attempt to understand causal structures a central element of physical intelligibility in terms of symmetries and their breakings. The importance of the mathematical tool is also highlighted enabling us to grasp the differences in the models for physics and biology which are proposed by continuous and discrete mathematics such as computational simulations. A distinction between principles of conceptual construction and principles of proofs both in physics and in mathematics guides this part of the work. As for biology being particularly difficult and not as thoroughly examined at a theoretical level we propose a unification by concepts an attempt which should always precede mathematisation. This constitutes an outline for unification also basing itself upon the highlighting of conceptual differences of complex points of passage of technical irreducibilities of one field to another. Indeed a monist point of view such as ours should not make us blind we the living objects are surely just big bags of molecules or at least this is our main metaphysical assumption. The point though is which theory can help us to better understand these bags of molecules as they are indeed rather singular from the physical point of view. Technically this singularity is expressed by the notion of extended criticality a notion that logically extends the pointwise critical transitions in physics.
