Thinking About Health:

Systems thinking: strengthening health systems in practice Kara Durski, Karl Blanchet, Aku Kwamie, Maria Del Rocio Saenz, 2023-12-12 As health systems all over the world not only recover from COVID 19 but learn to adapt to contexts of increasing uncertainty amidst persistent challenges it is clear that systems thinking has never been needed more Systems thinking is an approach to problem solving that views problems as part of a wider dynamic system It recognizes and prioritizes the understanding of linkages relationships interactions and interdependencies among the components of a system that give rise to the system s observed behaviour Systems thinking is a philosophical frame and it can also be considered a method with its own tools Identifying ways in the short and long term which strengthen health systems is critical and applied systems thinking offers opportunities to do this Systems thinking is often considered to be a field a discipline a philosophical approach and a set of tools and methods and can be defined as a way to understand and improve complex issues and situations Despite broad consensus that systems thinking is important in health systems strengthening it remains underutilized by researchers public health practitioners and health decision makers Further a gap remains in the translation from concept to policy *Health Systems Thinking* James A.
