Topics on Continua Sergio Macias, 2005-05-26 Specialized as it might be continuum theory is one of the most intriguing areas in mathematics. However, despite being popular journal fare, few books have thoroughly explored this interesting aspect of topology. In *Topics on Continua*, Sergio Macias, one of the field's leading scholars, presents four of his favorite continuum topics: inverse limits, Jones's set function T , homogenous continua, and n -fold hyperspaces, and in doing so, presents the most complete set of theorems and proofs ever contained in a single topology volume. Many of the results presented have previously appeared only in research papers and some appear here for the first time. After building the requisite background and exploring the inverse limits of continua, the discussions focus on Professor Jones's set function T and continua for which T is continuous. An introduction to topological groups and group actions leads to a proof of Effros's Theorem, followed by a presentation of two decomposition theorems. The author then offers an in-depth study of n -fold hyperspaces. This includes their general properties, conditions that allow points of n -fold symmetric products to be arcwise accessible from their complement, points that arcwise disconnect the n -fold hyperspaces, the n -fold hyperspaces of graphs, and theorems relating n -fold hyperspaces and cones. The concluding chapter presents a series of open questions on each topic discussed in the book. With more than a decade of teaching experience, Macias is able to put forth exceptionally cogent discussions that not only give beginning mathematicians a strong grounding in continuum theory but also form an authoritative single source guide through some of topology's most captivating facets.

Beck, 2012-12-06 *Communication Yearbook 30* continues the tradition of publishing rich state-of-the-discipline literature reviews. This volume offers insightful descriptions of research as well as reflections on the implications of those findings for other areas of the discipline. Editor Christina S. Beck presents a diverse international selection of articles that highlight empirical and theoretical intersections in the communication discipline. Chapters in this volume include reviews of literature on gain-framed and loss-framed messages, conversational topic, organizational rhetoric, work-life research, collaboration, bullying, forgiveness, language revitalization, Latina/o representation in the media, and television viewing patterns of older adults. This volume will be valuable to scholars across the communication discipline. *Communication Yearbook 30* will be particularly beneficial to scholars in the areas of interpersonal health, organizational family, and intercultural communication, language, and social interaction, and media studies.

Mahavier,2011-11-06 Inverse limits provide a powerful tool for constructing complicated spaces from simple ones They also turn the study of a dynamical system consisting of a space and a self map into a study of a likely more complicated space and a self homeomorphism In four chapters along with an appendix containing background material the authors develop the theory of inverse limits The book begins with an introduction through inverse limits on $[0, 1]$ before moving to a general treatment of the subject Special topics in continuum theory complete the book Although it is not a book on dynamics the influence of dynamics can be seen throughout for instance it includes studies of inverse limits with maps from families of maps that are of interest to dynamicists such as the logistic and the tent families This book will serve as a useful reference to graduate students and researchers in continuum theory and dynamical systems Researchers working in applied areas who are discovering inverse limits in their work will also benefit from this book
