The Turing Test James H. Moor,2012-12-06 In 1950 Alan Turing 1912 1954 published his famous article Computing Machinery and Intelligence in the journal Mind This article is arguably the most influential and widely read article in the philosophy of artificial intelligence Indeed most of the debate in the philosophy of artificial intelligence over the last fifty years concerns issues that were raised and discussed by Turing Turing s genius was not only in developing the theory of computability but also in understanding the impact both practical and philosophical that computing machinery would have Turing believed that computers if properly designed and educated could exhibit intelligent behavior even behavior that would be indistinguishable from human intelligent behavior His vision of the possibility of machine intelligence has been highly inspiring and extremely controversial In this classic article Turing presented his well known imitation game and predicted that about the year 2000 an average interrogator will not have more than 70 per cent chance of making the right identification after five minutes of questioning in the imitation game Based on the results of the Loebner 2000 contest and the accomplishments in the field of AI as impressive as they are Turing s prediction remains unfulfilled

*Chaos Bound* N. Katherine Hayles,2018-03-15 Hayles s point is that the almost simultaneous appearance of interest in complex systems across many disciplines physics mathematics biology information theory literature literary theory signals a profound paradigm and epistemological shift She calls the new paradigm orderly disorder This is a timely informative and enormously thought provoking book Nancy Craig Simmons American Literature N Katherine Hayles here investigates parallels between contemporary literature and critical theory and the science of chaos She finds in both scientific and literary discourse new interpretations of chaos which is seen no longer as disorder but as a locus of maximum information and complexity She

examines structures and themes of disorder in *The Education of Henry Adams* Doris Lessing's *Golden Notebook* and works by Stanislaw Lem Hayles shows how the writings of poststructuralist theorists including Barthes Lyotard Derrida Serres and de Man incorporate central features of chaos theory

Embodied Communication in Humans and Machines Ipke Wachsmuth,Manuela Lenzen,Günther Knoblich,2008-09-04 When people communicate face to face they don't just exchange verbal information Rather communication encompasses the whole body Communication partners synchronize their body sway and mimic or imitate each other's body postures and actions They produce a multitude of manual and facial gestures that help to illustrate what is being said show how communication partners feel or or reveal verbal deception Moreover face to face communication takes place in shared contexts where partners jointly attend and refer to the same objects often while working on joint tasks such as carrying a table or repairing a car together Traditionally communication research has neglected these parts of communication using the engineering model of signal transmission as the main theoretical metaphor This book takes a new look at recent empirical findings in the cognitive and neurosciences showing that the traditional approach is insufficient and presenting a new interdisciplinary perspective the Embodied Communication perspective The core claim of the Embodied Communication perspective is that human communication involves parallel and highly interactive couplings between communication partners These couplings range from low level systems for performing and understanding instrumental actions like the mirror system to higher systems that interpret symbols in a cultural context The book can also serve as a guide for engineers who construct artificial agents and robots that should be able to interact with humans
