The Seymour Cray Era of Supercomputers Boelie Elzen, Donald MacKenzie, 2025-01-22 This book describes the development and use of supercomputers in the period 1960 1996 a time that can be called the Seymour Cray Era For more than three decades Cray s computer designs were seen as the yardstick against which all other efforts were measured Initially this yardstick was sheer computing speed However the supercomputer world gradually became more complex and other factors became equally important The initial development of supercomputers was commissioned and financed by the Los Alamos and Lawrence Livermore National Laboratories which had huge computational needs in connection with nuclear weapons development The computers designed by Cray satisfied those needs while these computers were also sold to a few dozen other big research organizations and weather agencies From the 1980s a variety of companies started to compete with the Cray designs by offering supercomputers that used a new architectural approach MPP massively parallel processing This new architecture based on using tens of thousands of relatively simple microprocessors subsequently began to dominate high performance computing and marked the end of the Seymour Cray Era This book is important reading for anyone working in the area of high performance computing providing essential historical context for the work of a legendary pioneer and the computers he became famous for designing It will also be valuable to students of computing history and more generally to readers interested in the history of science and technology For advanced students the book illustrates how innovation in its very essence is a socio technical process not just a matter of developing the best technology but also of making appropriate choices concerning the interaction of human and technical factors in product design
