

English Syntax

The Different Types of Syntax

Generative syntax

how sentences are generated by the human brain

Transformational syntax

how sentences can be transformed into different forms while still retaining their meaning

Descriptive syntax

how language is actually used in practice, rather than how it "should" be used according to prescriptive rules

Comparative syntax

how different languages use syntax to convey meaning

English Syntax Rules

Subject-verb agreement

The subject and verb in a sentence must agree in number (i.e. singular or plural)

Word order

English sentences generally follow a subject-verb-object (SVO) order

Use of articles and prepositions

English uses articles (a, an, the) and prepositions (in, on, at, etc.) to convey specific meanings and relationships between words

Punctuation

The use of punctuation marks like commas, periods, and semicolons helps to clarify the meaning and structure of a sentence

The Syntax:

The Syntax-discourse Interface Petra Burkhardt, 2005-01-01 This book combines theoretical and experimental aspects of the establishment of dependency. It provides an account of dependency relations by focusing on the representation and interpretation of referentially dependent elements particularly regular reflexives logophors and pronouns. First the establishment of dependency is discussed within a model of syntax discourse correspondences that predicts an economy based dependency hierarchy contingent on the level of representation at which the dependency is formed as well as the internal structure of the dependent element and its antecedent. Secondly the model's predictions are substantiated by a series of experimental studies conducted in English and Dutch providing evidence from three sources of online sentence comprehension reaction time studies Broca's aphasia patient studies and event related brain potential studies. The findings show that dependencies are established at distinct levels of linguistic encoding i.e. syntax or discourse determined by the presence or absence of coargumenthood and the representation of the dependency forming elements.

The Syntax of Dutch Jan-Wouter Zwart, 2011-09-15 Dutch is a West Germanic language closely related to English and German but its special properties have long aroused interest and debate among students of syntax. This is an informative guide to the syntax of Dutch offering an extensive survey of both the phenomena of Dutch syntax and their theoretical analyses over the years. In particular the book discusses those aspects of Dutch syntax that have played an important role in the development of syntactic theory in recent decades. Presupposing only a basic knowledge of syntax and complete with an extensive bibliography this survey will be an important tool for students and linguists of all theoretical persuasions and for anyone working in Germanic linguistics linguistic typology and linguistic theory.

The Syntax of Subordination Dagmar Haumann, 2011-04-20 This study is concerned with the categorial status of subordinating conjunctions and the internal and external structure of subordinate clauses. Starting out from the categorizations of subordinating conjunctions that prevail in recent generative linguistic theory namely complementizers and prepositions and from the division of syntactic categories into lexical and functional ones the author investigates the lexical and grammatical properties of subordinating conjunctions which are held to account for both the distribution and the architecture of subordinate clauses. Central to this study is the relation between the category subordinating conjunction the licensing of its projection and the licensing of its complement and specifier position. Part I is concerned with subordination in early Generative Grammar the rise of the category C and the categorization of subordinating conjunctions. Part II focuses on recent conceptions of phrase structure the inventory of syntactic categories the lexical functional dichotomy and syntactic movement. Part III is concerned with the lexical properties of complementizers C prepositions P and a third category of subordinating conjunctions Subcon which conflates properties of Cs and Ps. This categorization of subordinating conjunctions is arrived at on the basis of the distribution of the phrases they head and the mechanisms by which these elements license their complement and specifier Cs as typical functional heads.

license both their complement and their specifier on the basis of feature checking mechanisms Ps as typical lexical heads license these positions by theta marking them Within SubconP the complement is licensed by feature checking as within CP and the specifier is licensed by theta marking as within PP

The Syntax of Italian Dialects Christina Tortora, 2003-07-03 This volume collects original theoretical work on the syntax and morphology of Italian and a wide range of Italian dialects It contains contributions by such leading figures as Cecilia Poletto Guglielmo Cinque and Richard Kayne and examines topics such as the syntax of ne the internal structure of personal pronouns the syntax morphology interface and functional projections at the clausal level

The Syntax of Relative Clauses Guglielmo Cinque, 2020-09-24 Relative clauses play a hugely important role in analysing the structure of sentences This book provides the first evidence that a unified analysis of the different types of relative clauses is possible a step forward in our understanding Using careful analyses of a wide range of languages Cinque argues that the relative clause types can all be derived from a single double headed structure He also presents evidence that restrictive maximalizing integrated non restrictive kind defining infinitival and participial RCs merge at different heights of the nominal extended projection This book provides an elegant generalization about the structure of all relatives Theoretically profound and empirically rich it promises to radically alter the way we think about this subject for years to come

The Syntax of Words Elisabeth O. Selkirk, 1982 This monograph examines complex words compounds and those involving derivational and inflectional affixation from a syntactic standpoint that encompasses both the structure of words and the system of rules for generating that structure The author contends that the syntax of words and the more familiar syntax involving relations among words must be defined by two discrete sets of principles in the grammar but nevertheless that word structure has the same general formal properties as the larger syntactic structure and is generated by the same sort of rule system This investigation of word structure and rule systems is based for the most part on the word syntax of English and related languages One of its major conclusions is that English word structure can be properly characterized solely in terms of a context free grammar Selkirk points out that the Semitic languages for example must be characterized in terms of a more elaborate schema The first chapter presents a general theory of word structure and discusses a context free grammar for words X theory in word structure and word structure rules The second chapter is concerned with compounding and probes the structure and headedness of compounds verbal compounds and the category type of English compounds The third and final chapter on affixation investigates the nature of affixes inflectional affixation and English derivational morphology This book is the seventh in the Linguistic Inquiry Monograph series

Coptic Interference in the Syntax of Greek Letters from Egypt Victoria Beatrix Maria Fendel, 2022-08-22 Egypt in the early Byzantine period was a bilingual country where Greek and Egyptian Coptic were used alongside each other Historical studies along with linguistic studies of the phonology and lexicon of early Byzantine Greek in Egypt testify to this situation In order to describe the linguistic traces that the language contact situation left behind in individuals linguistic output Coptic

Interference in the Syntax of Greek Letters from Egypt analyses the syntax of early Byzantine Greek texts from Egypt The primary object of interest is bilingual interference in the syntax of verbs adverbial phrases clause linkage as well as in semi formulaic expressions and formulaic frames The study is based on a corpus of Greek and Coptic private letters on papyrus which date from the fourth to mid seventh centuries originate from Egypt and belong to bilingual Greek Coptic papyrus archives
