Improving Workplace Learning Geraldine Castleton, Rodney Gerber, Hitendra Pillay, 2006 Closely linked to the concepts of

growth and globalisation is the increasing recognition being given to the importance of the workplace as a site of learning. The value of the book rests in the fact that this framework does not have its foundations in just one academic discipline but rather provides a range of perspectives drawn from psychology, social psychology, sociology and critical theory. The purpose is to move away from a unidimensional understanding of workplaces and workplace learning to provide a different standpoint from which to better appreciate the diversity and complexity of learning in the workplace. This significant book is divided into four inter-related sections with each section contributing to the evidence base referred to earlier by offering informed considerations of the following questions: What kinds of contextual issues impact on workplace learning and what are the implications of these for improving workplace learning? What kinds of knowledge are required for contemporary work and what implications are derived from these for improving workplace learning? What models and case studies exist that reflect practices for improving workplace learning and what consideration of directions for future action to improve workplace learning can be made?

Data-Driven Sustainability: Harnessing Technology for A Greener Future and Environmental Resilience Rubee Singh, Walter Leal Filho, Vikas Kumar, 2026-03-17. This book provides a timely and insightful exploration of how emerging digital technologies can be leveraged to achieve sustainability and build environmental resilience in the face of escalating global challenges. It offers readers a practical and theoretical foundation for understanding data-driven sustainability, a concept that refers to the integration of advanced data tools such as artificial intelligence, big data analytics, Internet of Things (IoT) and blockchain into environmental planning, policy and operations. With climate change, biodiversity loss, pollution and resource scarcity accelerating at an alarming pace, traditional approaches to sustainability are proving inadequate. The need for real-time data, predictive analytics, intelligent automation and transparent monitoring has never been more urgent. This book addresses that critical need by illustrating how data-centric technologies can help bridge the gap between sustainability ambitions and tangible action. It explores how big data can transform environmental intelligence, enabling governments, businesses and communities to track environmental performance in real-time, anticipate risks and intervene proactively. Artificial intelligence is examined as a powerful tool for optimizing resource use, modeling climate scenarios, enabling smart agriculture and enhancing energy efficiency through learning algorithms and pattern recognition.
