contributes to the three basic functions of pension schemes facilitating life cycle financial planning insuring idiosyncratic risks and sharing macroeconomic risks across generations It focuses on the optimal balance between the various pension pillars and on the optimal design of each of the schemes It sketches a number of economic trade offs showing that countries may opt for different pension schemes depending on how they react to these trade offs *Transactions of the American Institute of Mining Engineers* American Institute of Mining Engineers,1916 **Green National Accounting in Theory and Practice** Peter Birch Sørensen,2025-06-13 This book explains the theoretical and empirical foundations for constructing a measure of a country's Green GDP and how this measure relates to the conventional GDP Opening with an overview of the academic literature on green national accounting the first chapter sets up an analytical model of the interaction between a small open economy and the environment to derive a theoretically founded measure of the economy's Green Net National Income Green GDP The book then illustrates how the theory can be applied in practice to produce a time series for the evolution of Denmark's Green GDP and its various components with an emphasis on the environment over the last thirty years As far as possible the data used in the calculations were constructed in accordance with international statistical guidelines Therefore the careful explanation of the methodology which is outlined in the book can be applied to other countries using comparable data This book will be of significant interest to scholars in the field of environmental economics and statisticians and practitioners working on green national accounting **Bulletin of the American Institute of Mining Engineers** ,1915 Contains abstracts of professional and technical papers
