

Understanding Stroke

What is stroke?

A stroke is a medical condition that occurs when the blood supply to part of the brain is interrupted or reduced, depriving brain tissue of oxygen and nutrients. Brain tissue that is deprived of blood for too long begins to die. Stroke is a leading cause of death and disability in the United States.

What are the causes of stroke?

Stroke can be caused by a variety of conditions, including: **Ischemic stroke** (caused by a blood clot blocking a blood vessel), **hemorrhagic stroke** (caused by a blood vessel rupturing and bleeding into the brain), and **transient ischemic attack (TIA)** (a temporary interruption of blood flow to the brain).

Ischemic stroke occurs when a blood clot blocks a blood vessel that carries oxygen and nutrients to the brain. This causes brain tissue to die.

Stroke is a medical emergency. The longer a person is without blood flow to the brain, the more brain tissue is damaged.
