What Scientists Think Jeremy Stangroom, 2005-09-22 What are scientists working on today What do they worry about What do they think about the working of the brain climate change animal experimentation cancer and mental illness Is science progressing or in retreat Is this century humankind's last These are just some of the compelling and provocative questions tackled here by twelve of the world's leading scientists and scientific thinkers In engaging and lucid discussion they clarify many of the most urgent scientific challenges and dilemmas facing science today Essential reading for anyone interested in popular science What Scientists Think is edited and written by Jeremy Stangroom of the highly successful The Philosopher's Magazine and includes a foreword by Marek Kohn author of A Reason for Everything Natural Selection and the British Imagination

The Shape of Wonder Alan Lightman, Martin Rees, 2025-09-02 In this captivating insightful book acclaimed physicists Alan Lightman and Martin Rees illuminate the life and work of numerous scientists in order to demystify the scientific process and show that scientists are concerned citizens just like the rest of us Remarkable Illuminating with refreshing clarity the ordinary and sometimes extraordinary work of scientists This book is essential reading Jennifer Ackerman bestselling author of What an Owl Knows In an age of rapid scientific discovery and technological advancement it's understandable that many feel uneasy about the future While we might have confidence in these new developments when we go to the hospital for a medical procedure fly in an airplane or take an elevator to the top floor of a building the motivations and lives of scientists themselves feel shrouded from public view There is a growing sense that scientists are not to be trusted that they may be guided by political or financial interests or beholden to governments or state institutions This growing mistrust of scientists is an urgent problem With the onset of climate change the imminent threats of pandemic or nuclear war and rapid acceleration in the fields of artificial intelligence and DNA sequencing innovations in science have the potential to change the world It's crucial that we not only gain a better understanding of science as a field but also reestablish trust with its practitioners The Shape of Wonder guides us through the fascinating lives and minds of scientists around the world and throughout time from a young theoretical physicist who works as a research assistant professor at the University of Washington and rock climbs in their free time to German physicist Werner Heisenberg in his early life when he was a student of music and philosophy to Govind Swarup an Indian astronomer whose work on radio telescopes was profoundly important We get an inside peek at what makes scientists tick their daily lives passions and concerns about the societies they live in In this brilliant and elucidative work Lightman and Rees pull back the curtain on the field of science revealing that scientists are driven by the same sense of curiosity wonder and responsibility towards the future that shapes us all

Derry, 2002-03-04 How does a scientist go about solving problems How do scientific discoveries happen Why are cold fusion

and parapsychology different from mainstream science What is a scientific worldview In this lively and wide ranging book Gregory Derry talks about these and other questions as he introduces the reader to the process of scientific thinking From the discovery of X rays and semiconductors to the argument for continental drift to the invention of the smallpox vaccine scientific work has proceeded through honest observation critical reasoning and sometimes just plain luck Derry starts out with historical examples leading readers through the events experiments blind alleys and thoughts of scientists in the midst of discovery and invention Readers at all levels will come away with an enriched appreciation of how science operates and how it connects with our daily lives An especially valuable feature of this book is the actual demonstration of scientific reasoning Derry shows how scientists use a small number of powerful yet simple methods symmetry scaling linearity and feedback for example to construct realistic models that describe a number of diverse real life problems such as drug uptake in the body the inner workings of atoms and the laws of heredity Science involves a particular way of thinking about the world and Derry shows the reader that a scientific viewpoint can benefit most personal philosophies and fields of study With an eye to both the power and limits of science he explores the relationships between science and topics such as religion ethics and philosophy By tackling the subject of science from all angles including the nuts and bolts of the trade as well as its place in the overall scheme of life the book provides a perfect place to start thinking like a scientist
