Stop It Project Failures:

Stop IT Project Failures Dan Remenyi, 2010-02-17 This book is about information systems development failures and how to avoid them. It considers what goes wrong with information systems development projects and what actions may be taken to avoid potential difficulties. The reduction of the impact or even the elimination of the problems is discussed in terms of an information systems risk management programme. Stop IT Project failure helps to ensure that IS project managers are successful in helping to deliver application systems. However, IS development risk can never be entirely eliminated and consequently the practitioner needs to bear in mind that an IS development project is never without risk and hence there is a continuing potential for something to go wrong. The book covers the key issues and variables and makes specific practical suggestions about the good management practice that is required to implement IS project risk processes. Dr Dan Remenyi has spent more than 25 years working in the field of corporate computers and information systems. He has worked with computers as an IS professional business consultant and user. In all these capacities he has been primarily concerned with benefit realisation and obtaining the maximum value for money from the organisations information systems investment and effort. He has worked extensively in the field of information systems project management specialising in the area of project risk identification and management. He has written a number of books and papers in the field of IT management and regularly conducts courses and seminars as well as working as a consultant in this area. Dr Dan Remenyi holds a B Soc Sc an MBA and a PhD. He is a Visiting Professor at Chalmers University of Technology in Gothenberg Sweden and an associate member of faculty at Henley Management College in the United Kingdom.

Identifying Software Project Risks in the Canadian Financial Services Sector John A. Estrella,2007 Abstract Summary Frequent occurrence of software project failures has created two general streams of research One theme analyzed the common causes of cost overruns late schedules and unmet scope With the belief that project failures are avoidable through proactive means another group of researchers investigated software project risks With such intent comparative studies were conducted in Finland Hong Kong and the United States Subsequent research in Nigeria determined the impact of the socioeconomic context To further extend the coverage of prior studies the research in the current study focused specifically on the Canadian financial services sector Project managers were solicited for input to discover determine and rank risk factors in software projects using the same research design that was used in previous comparative research studies a three phase Delphi survey that uses nonparametric statistical techniques In sharp contrast to prior studies however this research aimed not for general applications of the results at the country level but for specific collective relevance to software projects in banks trust companies insurance companies mutual fund companies and similar organizations The composite rankings of the studies in Hong Kong Finland and the United States listed lack of management commitment inability to get user commitment and misunderstanding of the requirements as the top three risk items in software projects Given that only the misunderstanding of requirements made it into the top three risk items in Nigeria it would be of value to scholars and practitioners to determine how the results would differ if the study was conducted in a specific sector in the industry Except for one risk factor lack of dedicated full time project resources this study confirmed that the previous list of risk factors captured the top risk factors in the Canadian financial services sector
