

Common Food-Drug Interactions

	Food	Drug	What happens?
	Kale, broccoli (vitamin K)	blood thinners such as warfarin	Foods that are rich in vitamin K can reduce the effectiveness of blood thinners.
	Grapefruit	statins such as atorvastatin, lovastatin, simvastatin	Grapefruit can increase statin levels in your body, thereby increasing statin-related side effects.
	Bananas (potassium)	ACE inhibitors such as captopril, enalapril and lisinopril	ACE inhibitors increase potassium in your body. Too much potassium can cause an irregular heartbeat and heart palpitations.
	Walnuts, soybean flour (high fiber)	thyroid medications such as levothyroxine	High-fiber foods can prevent the body from absorbing thyroid medications.
	Dairy products (calcium)	quinolone antibiotics such as ciprofloxacin and levofloxacin	Calcium reduces the level of these antibiotics in your blood. Avoid eating dairy and calcium-fortified products alone.
	Salami, aged cheese (tyramine)	oxazolidinone antibiotics (such as linezolid) and MAOI-type antidepressants (such as phenelzine)	Eating a tyramine-rich diet while taking certain meds can cause a sudden, dangerous increase in blood pressure.

The Food and Drug Interaction Guide Brian L. G. Morgan,1986 *Handbook of Food-Drug Interactions* Beverly McCabe-Sellers, Eric H. Frankel, Jonathan J. Wolfe, 2003-04-29 With contributions from the fields of pharmacy dietetics and medicine *Handbook of Food Drug Interactions* serves as an interdisciplinary guide to the prevention and correction of negative food drug interactions Rather than simply list potential food drug interactions this book provides explanations and gives specific recommendations based on them

The Food and Drug Interaction Guide Brian L. G. Morgan,1986 **Avoid Food-Drug Interactions** U.s. Food and Drug Administration, National Consumers League, 2014-07-05 What you eat and drink can affect the way your medicines work Use this guide to alert you to possible food drug interactions and to help you learn what you can do to prevent them In this guide a food drug interaction is a change in how a medicine works caused by food caffeine or alcohol A food drug interaction can prevent a medicine from working the way it should cause a side effect from a medicine to get worse or better cause a new side effect A medicine can also change the way your body uses a food Any of these changes can be harmful This guide covers interactions between some common prescription and over the counter medicines and food caffeine and alcohol These interactions come from medicine labels that FDA has approved This guide uses the generic names of medicines never brand names

Food and Drug Interaction Guide Leon H. Rottmann, 1991 A brief description of the interactions between food and drugs Precautionary advice is given to prevent adverse reactions

Handbook of Drug-Nutrient Interactions Joseph I. Boullata, Vincent T. Armenti, 2004-04-17 Although there is a great deal of literature regarding drug nutrient interactions DNIs there are limited sources of up to date comprehensive information The *Handbook of Drug Nutrient Interactions* admirably fills this gap The editors Dr Joseph I Boullata and Dr Vincent T Armenti have a wealth of experience in this therapeutic area and have assembled a fine cadre of chapter authors who have individually contributed their high level of expertise As treatment for many diseases becomes increasingly complex with multiple drug therapies scheduled at varying times the need to identify clinically significant DNIs is an essential part of medication management This is a shared responsibility between health care professionals to interpret available data and individualize an approach to therapy that is compatible with the patient's disease state life stage and dietary intake Awareness of the significance of drug food interactions is generally lacking Although many texts contain lengthy lists of possible interactions few data are provided for the clinician to gain an understanding of the mechanism of action of the interaction and subsequently apply the information to a particular patient or group of patients For example in the management of patients with HIV/AIDS who are taking complex prescribed drug regimens herbal products and nutritional supplements many of which are affected by dietary intake careful attention to DNIs is a critical component of therapy Clinicians need to take account of not only the well documented interactions between drugs and nutrients but also the less obvious effects on drug nutrient disposition and metabolism
