The Projective Cast Architecture And Its Three Geometries:

The Projective Cast Robin Evans,2000-08-25 Robin Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form Anyone reviewing the history of architectural theory Robin Evans observes would have to conclude that architects do not produce geometry but rather consume it In this long awaited book completed shortly before its author s death Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form He shows that geometry does not always play a stolid and dormant role but in fact may be an active agent in the links between thinking and imagination imagination and drawing drawing and building He suggests a theory of architecture that is based on the many transactions between architecture and geometry as evidenced in individual buildings largely in Europe from the fifteenth to the twentieth century From the Henry VII chapel at Westminster Abbey to Le Corbusier s Ronchamp from Raphael s S Eligio and the work of Piero della Francesca and Philibert Delorme to Guarino Guarini and the painters of cubism Evans explores the geometries involved asking whether they are in fact the stable underpinnings of the creative intuitive or rhetorical aspects of architecture In particular he concentrates on the history of architectural projection the geometry of vision that has become an internalized and pervasive pictorial method of construction and that until now has played only a small part in the development of architectural theory Evans describes the ambivalent role that pictures play in architecture and urges resistance to the idea that pictures provide all that architects need suggesting that there is much more within the scope of the architect s vision of a project than what can be drawn He defines the different fields of projective transmission that concern architecture and investigates the ambiguities of projection and the interaction of imagination with projection and its metaphors

The Projective Cast Robin Evans,2000 *Designing Kinetics for Architectural Facades* Jules Moloney,2011-06-14 Architectural facades now have the potential to be literally kinetic through automated sunscreens and a range of animated surfaces This book explores the aesthetic potential of these new types of moving facades Critique of theory and practice in architecture is combined here with ideas from kinetic art of the 1960 s From this background the basic principles of kinetics are defined and are used to generate experimental computer animations By classifying the animations a theory of kinetic form called state change is developed This design research provides a unique and timely resource for those interested in the capacity of kinetics to enliven the public face of architecture Extra material including animations can be seen at www.kineticarch.net/statechange

Finding San Carlino Adil Mansure, Skender Luarasi, 2019-12-06 The church of San Carlo alle Quattro Fontane also called San Carlino is an architectural artefact that continues to attract numerous hypotheses and geometric analyses attempting to explain its form and meaning Numerous investigations have attempted to reveal its underlying geometrical principles without however reaching a consensus *Finding San Carlino* presents an edited collection of perspectives on Borromini s famous Baroque church from a range of established and emerging scholars in architectural history and theory including Werner Oechslin Karsten Harries Michael Hill and

Lauren Jacobi amongst others This book offers the reader different means of engaging with enjoying and articulating San Carlino s complexity non consensus and ambiguity It is precisely such a unique disposition that motivates this book to explore multiple modes of architectural enquiry and delve into a series of theoretical and historiographical questions such as why was Borromini not able to post rationalize his architecture with his drawings What is San Carlino s exemplary value and why does it continually engender exegetical and hermeneutic desire What is the role of geometry in architecture in history and today Written for researchers scholars and postgraduate students in architectural history and theory the book uses San Carlino as an enigmatic centering point for a set of significant contemporary voices to explore new modes of confrontation and comparison

Avery Index to Architectural Periodicals. 2d Ed., Rev. and Enl Avery Library,1997 **Sir John Vanbrugh** Vaughan Hart,2008 In explaining why Vanbrugh s buildings look the way they do Hart allows his novel architectural forms to be understood for the first time as expressions of the visual and psychological theories of his friend and fellow Whig Joseph Addison BOOK JACKET Architecture Reading Lists and Course Outlines: Architectural design Architectural theory, history and criticism Human behavior Professional practice Special topics Urbandesign theory and history Georgia Bizios,1998 **Atmospheres of Projection** Giuliana Bruno,2022-10-13 Following on the success of Surface Bruno s previous book with us in this new one she explores the act and art of projection in its manifold guises and what those can tell us about how we think and feel and create the world we inhabit This is not just an exploration of the psychological operation of projection the idea that we cast onto others the qualities we refuse to acknowledge in ourselves It is a major work of cultural history and media archaeology As a way to transform space and atmosphere projection has a long history in the arts dating back to shadow plays camera obscuras magic lantern shows and phantasmagoria But the atmosphere of projection is not a thing of the past alone It is alive and well today It continues to fascinate us as screens filled with moving figures pervade the spaces of the art gallery and the museum as well as the environments of our daily lives What is the root of our fascination How does it manifest in contemporary art How do we define atmosphere How is projection an atmosphere Are these two modalities conceptually and historically related and how so Why are artists today so interested in environments and in elements of projection To explain this continual fascination with projection and atmosphere Bruno traverses psychoanalysis architecture the history of science visual art and moving image culture to see how projective mechanisms and their environments have developed over time

The Symbol at Your Door Nigel Hiscock,2007 Is the display of number and geometry in medieval religious architecture evidence of intended symbolism This book offers a new perspective in the retrieval of meaning from architecture in the Greek East and the Latin West and challenges the view that geometry was merely an outcome of practical procedures by masons Instead it attributes intellectual meaning to it as understood by Christian Platonist thought and provides compelling evidence that the symbolism was often intended In so doing the book serves as a companion volume to *The Wise Master Builder* by the same author which found the same system

implicit in plans of cathedrals and abbeys The present book explains how the architectural symbolism proposed could have been understood at the time as supported by medieval texts and its context since it is context that can confer specific meaning The introduction locates the study in its critical context and summarizes Christian Platonism as it determined the meaning of number and geometry The investigation opens with the recurrent symbolism of the dome and the cube as heaven and earth in the Byzantine world and moves to the duality of the temple and the body in the East and West as reflections of Plato's universal macrocosm and human microcosm The study then examines each of the figures of Platonic geometry in the architecture of the West against the background of their mathematics and metaphysics before proceeding to their synthesis with the circle as seen in circular and polygonal structures the divisions of circles in Christian art and their display in window tracery culminating in the rose window In view of the multivalency of the symbolism the investigation establishes systematic occurrences of it which strongly suggest patterns of thought underlying systems of design The book concludes with a series of test cases which show the after life of the same symbolism as it overlapped with the Renaissance
