The Sea Urchin Embryo A Developmental Biological System:

The Sea Urchin Embryo G. Giudice, 2012-12-06 This book should be regarded as the continuation to my previous book *Developmental Biology of the Sea Urchin Embryo* edited by the Academic Press in 1973 rather than as a new edition Due to the exceedingly high rate of development in this field something like 2000 papers have been published on this subject in these last 10 years I preferred in fact not to describe again in detail the enormous amount of the old literature as was attempted in my previous book but to briefly summarize the state of the art in each problem and to describe in some detail the experiments performed in the last 12 years In doing so more emphasis was given to the more recent ones and to those which can be considered as corner stones in each subject Care was however taken to mention the reviews or key papers in which the reader can find a source of the details of the older literature besides referring him to my previous book **Current Topics in Developmental Biology**, 1999-05-10 *Current Topics in Developmental Biology* Volume 45 surveys the major issues at the forefront of developmental biology This volume like others in the series is valuable to researchers in the fields of animal and plant development and to students and other professionals who want an introduction to current topics in cellular and molecular approaches to developmental biology Chapters on the nervous system reproductive system and flowering introduce new models and concepts for understanding these processes Includes development of the nervous and reproductive systems Covers flowering in plants Highlights the roles of homeobox related transcription factors and growth factors in axis and organ development **Calcification in Biological Systems** Ermanno Bonucci, 2020-07-24 *Calcification in Biological Systems* provides a collection of up to date papers regarding calcification in a variety of biological systems The papers are not simple reviews of the literature Each paper reflects the personal experience of the author s and is rich in constructive criticism and suggestions Topics range from basic molecular processes to general structural problems in systems as different as unicellular organisms and human skeletal tissues Because calcification is so diffuse in the animal kingdom this book makes no attempt to achieve a conclusive synthesis of available results and current ideas Instead its merit lies in its ability to be useful to investigators with different scientific backgrounds and areas of interest [Handbook of Systems Biology](#) Marian Walhout, Marc Vidal, Job Dekker, 2012-12-31 This book provides an entry point into *Systems Biology* for researchers in genetics molecular biology cell biology microbiology and biomedical science to understand the key concepts to expanding their work Chapters organized around broader themes of Organelles and Organisms Systems Properties of Biological Processes Cellular Networks and Systems Biology and Disease discuss the development of concepts the current applications and the future prospects Emphasis is placed on concepts and insights into the multi disciplinary nature of the field as well as the importance of systems biology in human biological research Technology being an extremely important aspect of scientific progress overall and in the creation of new fields in particular is discussed in boxes within each chapter to relate to appropriate topics 2013 Honorable Mention for Single Volume Reference in Science from the Association

Catalyzing Inquiry at the Interface of Computing and Biology National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on Frontiers at the Interface of Computing and Biology,2006-01-01 Advances in computer science and technology and in biology over the last several years have opened up the possibility for computing to help answer fundamental questions in biology and for biology to help with new approaches to computing Making the most of the research opportunities at the interface of computing and biology requires the active participation of people from both fields While past attempts have been made in this direction circumstances today appear to be much more favorable for progress To help take advantage of these opportunities this study was requested of the NRC by the National Science Foundation the Department of Defense the National Institutes of Health and the Department of Energy The report provides the basis for establishing cross disciplinary collaboration between biology and computing including an analysis of potential impediments and strategies for overcoming them The report also presents a wealth of examples that should encourage students in the biological sciences to look for ways to enable them to be more
