The Sentence Processing Resource:

   The Sentence Processing Resource Pack Jane Marshall,1999   *Linguistics for Clinicians* Maria Black,Shula Chiat,2014-04-23 Linguistics for Clinicians provides an introduction to linguistic analysis in the clinical context The book draws on a range of linguistic theories and descriptions equipping readers with a conceptual toolkit that will enable them to analyse data systematically taking into account different types of linguistic properties pick out significant patterns that can give them clinically relevant cues build explicit arguments to back up their observations and hypotheses select relevant linguistic items for assessment and therapy tasks The syntactic sections cover standard concepts and their application to a range of data is worked through step by step This solid grounding in syntax provides a springboard for detailed analyses of sentence semantics and sentence phonology which are particularly relevant in clinical assessment and therapy but are not usually available outside specialist linguistic texts These sections cover event structure and its representation by verbs and their complements the timing and modality of events and their representation by the auxiliary system rhythmic patterns of sentences and how the type and position of individual words influences them Clinical relevance is a central theme throughout the book All linguistic concepts are introduced with examples of their clinical use Analytical tips are included to anticipate and deal with common problems of clinical application Extensive exercises further illustrate the use of linguistic concepts in data analysis and task construction Linguistics for Clinicians is primarily a linguistics textbook for students and teachers on clinical courses It is also a useful resource for practising clinicians psycholinguitics students and researchers in language impairments   Interaction Between Attention and Language Systems in Humans Ramesh Kumar Mishra,2015-10-09 This original volume examines the interface between attentional and linguistic processes in humans from the perspectives of psycholinguistics and cognitive science It systematically explores how autonomy and automaticity are reflected during language processing in a variety of situations A true mechanistic explanation of how humans process language would require a complete understanding of the interface language has with important cognitive systems like attention memory as well as with vision Interdisciplinary work in this area has so far not been able to generate a substantial theoretical position on this issue This volume therefore looks at different language processing domains such as speaking listening reading as well as discourse and text processing to evaluate the role attention plays in such performances and also at how often linguistic inputs affect attentional processing In this sense it proposes that the attention language interface is bidirectional It also considers applied issues like language disorders bilingualism and illiteracy where the attention language interface seems especially relevant as a theoretical apparatus for research investigations Therefore this volume brings closer theoretical explanations from the language sciences and cognitive sciences It argues that language processing is multi modal in its very essence and many conceptual structures in language evolve out of a complex interplay among participating cognitive systems such as attention and memory supported by vision and audition   **Attention and Performance XII** Max
