Parr, 1997 A guide to the philosophical implications of the latest developments in the physical sciences Aimed at the general reader this concise and elegant work will both inform and stimulate as well as providing a basis for understanding more advanced works

A Brief History of the Philosophy of Time Adrian Bardon, 2024 This thoroughly revised and updated edition of Adrian Bardon's *A Brief History of the Philosophy of Time* is a short introduction to the history philosophy and science of the study of time from the pre Socratic philosophers through Einstein and beyond Bardon covers subjects such as time and change the experience of time physical and metaphysical approaches to the nature of time the direction of time time travel time and freedom of the will and scientific and philosophical approaches to cosmology and the beginning of time He employs helpful illustrations and keeps technical language to a minimum in bringing the resources of over 2500 years of philosophy and science to bear on some of humanity's most fundamental and enduring questions

Time in Science and Philosophy Jiří Zeman, 1971 Time is one of the most fundamental problems facing modern scientists and philosophers the aim of this work is to shed light on the topic from various viewpoints and thus to promote understanding among specialists from several fields and between East and West The first section of the volume deals with the problems of time in astronomy and physics Among the problems under scrutiny here are the direction and the irreversibility of time and some general physical problems of time touching on questions of philosophy The second part is concerned with problems of time in geology biology and psychology the third with problems of philosophy although these are also treated in other chapters The concluding fourth part considers problems of time measurement The work should make a positive contribution to interdisciplinary understanding inside front flap

Philosophy of Physics Tim Maudlin, 2012 Introduces non physicists to core philosophical issues surrounding the nature structure of space time is also an ideal resource for physicists interested in the conceptual foundations of space time theory Provides a broad historical overview from Aristotle to Einstein covers the Twins Paradox Galilean relativity time travel more

Time of Nature and the Nature of Time Christophe Bouton, Philippe Huneman, 2017-05-30 This volume addresses the question of time from the perspective of the time of nature Its aim is to provide some insights about the nature of time on the basis of the different uses of the concept of time in natural sciences Presenting a dialogue between philosophy and science it features a collection of papers that investigate the representation modeling and understanding of time as they appear in physics biology geology and paleontology It asks questions such as whether or not the notions of time in the various sciences are reducible to the same physical time what status should be given to timescale differences or what are the specific epistemic issues raised by past facts in natural sciences The book first explores the experience of time and its relation to time in nature in a set of chapters that bring together what human experience and physics enable metaphysicians logicians and scientists to say about time Next it studies time in physics including some puzzling paradoxes about time raised by the theory

of relativity and quantum mechanics The volume then goes on to examine the distinctive problems and conceptions of time in the life sciences It explores the concept of deep time in paleontology and geology time in the epistemology of evolutionary biology and time in developmental biology Each scientific discipline features a specific approach to time and uses distinctive methodologies for implementing time in its models This volume seeks to define a common language to conceive of the distinct ways different scientific disciplines view time In the process it offers a new approach to the issue of time that will appeal to a wide range of readers philosophers and historians of science metaphysicians and natural scientists be they scholars advanced students or readers from an educated general audience

In Search of Time Dan Falk, 2009-10-20 An enjoyable and compelling ride through one of life's most fascinating enigmas What then is time If no one asks of me I know St Augustine of Hippo lamented But if I wish to explain to him who asks I know not Who wouldn't sympathize with Augustine's dilemma Time is at once intimately familiar and yet deeply mysterious It is thoroughly intangible We say it flows like a river yet when we try to examine that flow the river seems reduced to a mirage No wonder philosophers poets and scientists have grappled with the idea of time for centuries The enigma of time has also captivated science journalist Dan Falk who sets off on an intellectual journey In Search of Time The quest takes him from the ancient observatories of stone age Ireland and England to the atomic clocks of the U S Naval Observatory from the layers of geological deep time in an Arizona canyon to Albert Einstein's apartment in Switzerland Along the way he talks to scientists and scholars from California to New York from Toronto to Oxford He speaks with anthropologists and historians about our deep desire to track time's cycles he talks to psychologists and neuroscientists about the mysteries of memory he quizzes astronomers about the beginning and end of time Not to mention our latest theories about time travel and the paradoxes it seems to entail We meet great minds from Aristotle to Kant from Newton to Einstein and we hear from today's most profound thinkers Roger Penrose Paul Davies Julian Barbour David Deutsch Lee Smolin and many more As usual Dan Falk's style combines exhaustive research with a lively accessible and often humorous style making In Search of Time a delightful tour through a most curious dimension

Philosophy of Time Sean Enda Power, 2021-05-26 As a growing area of research the philosophy of time is increasingly relevant to different areas of philosophy and even other disciplines This book describes and evaluates the most important debates in philosophy of time under several subject areas metaphysics epistemology physics philosophy of language philosophy of mind cognitive science rationality and art Questions this book investigates include the following Can we know what time really is Is time possible especially given modern physics Must there be time because we cannot think without it What do we experience of time How might philosophy of time be relevant to understanding the mind-body relationship or evidence in cognitive science Can the philosophy of time help us understand biases toward the future and the fear of death How is time relevant to art and is art relevant to philosophical debates about time Finally what exactly could time travel be And could time travel satisfy emotions such as nostalgia and regret Through asking such questions and showing how they

might be best answered the book demonstrates the importance philosophy of time has in contemporary thought Each of the book s ten chapters begins with a helpful introduction and ends with study questions and an annotated list of further reading This and a comprehensive bibliography at the end of the book prepare the reader to go further in their study of the philosophy of time Rationalist Empiricism Nathan Brown,2021-01-05 Twenty first century philosophy has been drawn into a false opposition between speculation and critique Nathan Brown shows that the key to overcoming this antinomy is a re engagement with the relation between rationalism and empiricism If Kant s transcendental philosophy attempted to displace the opposing priorities of those orientations any speculative critique of Kant will have to re open and consider anew the conflict and complementarity of reason and experience Rationalist Empiricism shows that the capacity of reason and experience to extend and yet delimit each other has always been at the core of philosophy and science Coordinating their discrepant powers Brown argues is what enables speculation to move forward in concert with critique Sweeping across ancient modern and contemporary philosophy as well as political theory science and art Brown engages with such major thinkers as Plato Descartes Hume Hegel Marx Heidegger Bachelard Althusser Badiou and Meillassoux He also shows how the concepts he develops illuminate recent projects in the science of measurement and experimental digital photography With conceptual originality and argumentative precision Rationalist Empiricism reconfigures the history and the future of philosophy politics and aesthetics School & Society James McKeen Cattell,Will Carson Ryan,Raymond Walters,1929
