*Forecasting, Structural Time Series Models and the Kalman Filter* Andrew C. Harvey,1990-02-22 In this book Andrew Harvey sets out to provide a unified and comprehensive theory of structural time series models Unlike the traditional ARIMA models structural time series models consist explicitly of unobserved components such as trends and seasonals which have a direct interpretation As a result the model selection methodology associated with structural models is much closer to econometric methodology The link with econometrics is

made even closer by the natural way in which the models can be extended to include explanatory variables and to cope with multivariate time series From the technical point of view state space models and the Kalman filter play a key role in the statistical treatment of structural time series models The book includes a detailed treatment of the Kalman filter This technique was originally developed in control engineering but is becoming increasingly important in fields such as economics and operations research This book is concerned primarily with modelling economic and social time series and with addressing the special problems which the treatment of such series poses The properties of the models and the methodological techniques used to select them are illustrated with various applications These range from the modelling of trends and cycles in US macroeconomic time series to an evaluation of the effects of seat belt legislation in the UK

**Threshold Models in Non-linear Time Series Analysis** H. Tong, 2012-12-06 In the last two years or so I was most fortunate in being given opportunities of lecturing on a new methodology to a variety of audiences in Britain China Finland France and Spain Despite my almost Confucian attitude of preferring talking i e a transient record to writing i e a permanent record the warm encouragement of friends has led to the ensuing notes I am also only too conscious of the infancy of the methodology introduced in these notes However it is my sincere hope that exposure to a wider audience will accelerate its maturity Readers are assumed to be familiar with the basic theory of time series analysis The book by Professor M B Priestley 1981 may be used as a general reference Chapter One is addressed to the general question why do we need non linear time series models After describing some significant advantages of linear models it singles out several major limitations of linearity Of course the selection reflects my personal view on the subject which is only at its very beginning although there does seem to be a general agreement in the literature that time irreversibility and limit cycles are among the most obvious
