 Verbruggen,2012-12-06 This book is concerned with Artificial Intelligence AI concepts and techniques as applied to industrial  
 decision making control and automation problems The field of AI has been expanded enormously during the last years due to  
 that solid theoretical and application results have accumulated During the first stage of AI development most workers in the  
 field were content with illustrations showing ideas at work on simple problems Later as the field matured emphasis was  
 turned to demonstrations that showed the capability of AI techniques to handle problems of practical value Now we arrived  
 at the stage where researchers and practitioners are actually building AI systems that face real world and industrial  
 problems This volume provides a set of twenty four well selected contributions that deal with the application of AI to such  
 real life and industrial problems These contributions are grouped and presented in five parts as follows Part 1 General Issues  
 Part 2 Intelligent Systems Part 3 Neural Networks in Modelling Control and Scheduling Part 4 System Diagnostics Part 5  
 Industrial Robotic Manufacturing and Organizational Systems Part 1 involves four chapters providing background material  
 and dealing with general issues such as the conceptual integration of qualitative and quantitative models the treatment of  
 timing problems at system integration and the investigation of correct reasoning in interactive man robot systems      *The*
