Topological Social Choice:

Topological Social Choice Geoffrey Heal, 2012-12-06 The origins of this volume can be traced back to a conference on Ethics Economic and Business organized by Columbia Business School in March of 1993 and held in the splendid facilities of Columbia's Casa Italiana Preliminary versions of several of the papers were presented at that meeting In July 1994 the Fields Institute of Mathematical Sciences sponsored a workshop on Geometry Topology and Markets additional papers and more refined versions of the original papers were presented there They were published in their present versions in Social Choice and Welfare volume 14 number 2 1997 The common aim of these workshops and this volume is to crystallize research in an area which has emerged rapidly in the last fifteen years the area of topological approaches to social choice and the theory of games The area is attracting increasing interest from social choice theorists game theorists mathematical economists and mathematicians yet there is no authoritative collection of papers in the area Nor is there any surveyor book to give a perspective and act as a guide to the issues in and contributions to this new area One of the two aims of this volume is in some measure to play this role the other aim is of course to present interesting and surprising new results Social Choice and Game Theory Graciela Chichilnisky, 2010 This chapter presents a summary of recent results obtained in game and social choice theories and highlights the application and the development of tools in algebraic topology The purpose is expository no attempt is made to provide complete proofs for which references are given nor to review the previous work in this area which covers a significant subset of the economic literature The use of topological tools has a long tradition in economic analysis which goes back to the work of Von Neumann on balanced economic growth of 1937 and 1945 He proved a generalization of Brouwer's fixed point theorem that was the basis of Kakutani's theorem In game theory and in general equilibrium market analysis fixed point methods are the topological methods most frequently utilized to show existence of solutions As a matter of fact fixed point theorems are the largest part of applications of topology to economics as a whole Instead of topological methods social choice theory has traditionally been formulated in a combinatorial fashion following the first formal works of Arrow 1951 and Black 1948 in this area However we shall now show that many problems of game and social choice theories when properly formulated exhibit an intrinsic topological structure that may be fruitfully examined with algebraic topology tools that go beyond fixed point theorems such as homotopy and cohomology theories This allows us to tap a wealth of existing topological techniques as well as to develop new ones to resolve problems in social choice and game theories This chapter studies certain social choice paradoxes and their resolution the relation of a fixed point theorem with the social choice paradox the equivalence of the Pareto condition and the existence of a dictator majority rules aggregation in large economies and the aggregation of Von Neumann Morgenstern utilities for choices under uncertainty Within game theory we summarize results on the manipulation of games the existence of Nash equilibrium of certain non convex games and the fairness of these games and the existence and characterization of strategy proof games a problem that

appears in the literature on economies with public goods *Social Choice and Resource Allocation* G. M. Heal, 1995

Social Choice and Resources Allocation Geoffrey M. Heal, 2011 Topological social choice is an area which has evolved rapidly in recent years It involves the use of continuous or topological techniques to study what have come to be known as Chichilnisky rules The field has quickly moved from a separate and distinct area of social choice to one which is integrated into the mainstreams of both social choice theory and general equilibrium theory and which has come to be a bridge between these previously disparate areas One of the most striking results to emerge is Chichilnisky's result on the equivalence between Arrow's paradox Chichilnisky's paradox the existence of a competitive equilibrium in a general equilibrium model and the non emptiness of the core Arrow paradox Chichilnisky paradox Competitive equilibrium Core This shows that social choice is an integral part of the problem in economics and that at a deep level all forms of resource allocation are equivalent The topological approach to social choice also leads to a set of results on incentive compatibility and manipulability There is a result equivalent to the Gibbard Satterthwaite result on manipulability this result states that any social choice rule which is continuous and respects unanimity must admit a strategic dictator someone who has the ability to force whichever outcome he or she most wants generally be misrepresentation Chichilnisky Chichilnisky and Heal Koshevoy There is also a very simple characterization of the conditions necessary and sufficient for non constant manipulability of a continuous social choice rule as those which are locally constant or dictatorial Chichilnisky and Heal Finally one can apply these techniques to the analysis of social choice with infinite populations and show that the rules which are possible in this case are limits of the preferences along sequences of voters which form ultrafilter Chichilnisky and Heal *Topological Results in Social Choice Theory* Paras Praful Mehta, 1994

From Topology to Computation: Proceedings of the Smalefest Morris W. Hirsch, Jerrold E. Marsden, Michael Shub, 2012-12-06 An extraordinary mathematical conference was held 5-9 August 1990 at the University of California at Berkeley From Topology to Computation Unity and Diversity in the Mathematical Sciences An International Research Conference in Honor of Stephen Smale's 60th Birthday The topics of the conference were some of the fields in which Smale has worked Differential Topology Mathematical Economics Dynamical Systems Theory of Computation Nonlinear Functional Analysis Physical and Biological Applications This book comprises the proceedings of that conference The goal of the conference was to gather in a single meeting mathematicians working in the many fields to which Smale has made lasting contributions The theme Unity and Diversity is enlarged upon in the section entitled Research Themes and Conference Schedule The organizers hoped that illuminating connections between seemingly separate mathematical subjects would emerge from the conference Since such connections are not easily made in formal mathematical papers the conference included discussions after each of the historical reviews of Smale's work in different fields In addition there was a final panel discussion at the end of the conference

Topological (in) Hegel Borislav G. Dimitrov, 2018-01-23 The aim of this book is to critically examine whether it is methodologically possible to combine mathematical rigor topology with a

systematic dialectical methodology in Hegel and if so to provide as result of my interpretation the outline of Hegel s Analysis Situs also with the proposed models build on the topological manifold cobordism topological data analysis persistent homology simplicial complexes and graph theory to provide an indication of how the merger of Hegel s dialectical logic and topology may be instrumental to a systematic logician and of how a systematic dialectical logic perspective may help mathematical model builders

The Theory of Committees and Elections by Duncan Black and Committee Decisions with Complementary Valuation by Duncan Black and R.A. Newing Iain S. McLean, Alistair McMillan, Burt L.

Monroe, 2013-03-09 R H Coase Duncan Black was a close and dear friend A man of great simplicity unworldly modest diffident with no pretensions he was devoted to scholarship In his single minded search for the truth he is an example to us all Black's first degree at the University of Glasgow was in mathematics and physics Mathematics as taught at Glasgow seems to have been designed for engineers and did not excite him and he switched to economics which he found more congenial But it was not in a lecture in economics but in one on politics that he found his star One lecturer A K White discussed the possibility of constructing a pure science of politics This question caught his imagination perhaps because of his earlier training in physics and it came to absorb his thoughts for the rest of his life But almost certainly nothing would have come of it were it not for his appointment to the newly formed Dundee School of Economics where the rest of the teaching staff came from the London School of Economics At Glasgow economics as in the time of Adam Smith was linked with moral philosophy At Dundee Black was introduced to the analytical x The Theory of Committees and Elections approach dominant at the London School of Economics This gave him the approach he used in his attempt to construct a pure science of politics

Vagueness and Rationality in Language Use and Cognition Richard Dietz, 2019-09-17 This volume presents new conceptual and experimental studies which investigate the connection between vagueness and rationality from various systematic directions such as philosophy linguistics cognitive psychology computing science and economics Vagueness in language use and cognition has traditionally been interpreted in epistemic or semantic terms The standard view of vagueness specifically suggests that considerations of agency or rationality broadly conceived can be left out of the equation Most recently new literature on vagueness has been released which suggests that the standard view is inadequate and that considerations of rationality should factor into more comprehensive models of vagueness The methodological approaches presented here are diverse ranging from philosophical interpretations of rational credence for vagueness to adaptations of choice theory dynamic choice theory revealed preference models social choice theory probabilistic models of pragmatic reasoning Bayesian pragmatics evolutionary game theory and conceptual space models of categorisation

Topology and Markets Graciela Chichilnisky, This volume presents the proceedings of a workshop on geometry topology and markets held at The Fields Institute The workshop was attended by eminent mathematicians and financial and economic theorists Using a topological approach the volume discusses new mathematics and its applications to social sciences and financial markets Topics addressed at the workshop included new topological invariants for existence characterization and computation of market equilibria and their relation to social choice and to other forms of resource allocation competitive and cooperative systems algebraic geometry and markets with increasing returns computational complexity and stochastic processes and financial mark

Mathematical Survey Lectures 1943-2004 Beno Eckmann, 2006-10-11 In my long

professional life as a mathematician I have had to deliver various survey lectures They were of different character according to the occasion A selected number are reproduced in this volume They were with few exceptions printed in books or in periodicals and are reproduced here without any modification I started as a student at the ETH Zurich in 1935 and have spent my working life there with the exception of the period 1942-1948 lecturer then associate professor at the University of Lausanne and 1947 and 1951-52 Institute for Advanced Study Princeton In 1948 I was appointed as a professor at the ETH I retired in 1984 and have since then been professor emeritus The surveys in this volume are lectures given at congresses and workshops at international congresses of mathematicians plenary or section lectures and at special occasions like birthdays or commemorations They all reflect the special interests of the respective times Although they are in fields of topology algebra and differential geometry they reveal the big changes mathematics has undergone over the years from 1943 to 2004 New thinking has been developed it has created new problems or simply has let old problems appear in a new light

Handbook of Social Choice and Welfare Kenneth J. Arrow, A.K. Heal, 1997 Social Choice and Welfare Prasanta K. Pattanaik, Maurice Salles, 1983 This volume comprises papers presented at the Symposium on Collective Choice by leading experts in this field It presents recent advances in Social Choice Theory and Welfare Economics The papers are classified in two broad groups 1 those dealing with the ethical aspects of the theory of social choice and 2 those concerned with the positive aspects The papers in the first part are concerned with the Arrow type aggregation problem or aspects of it and with more specific questions relating to optimality justice and welfare In part II several papers discuss the problem of strategic misre *A Topological Invariant for Competitive Markets* Graciela Chichilnisky, 1996
