Topological Structure And Analysis Of Interconnection Networks:

Topological Structure and Analysis of Interconnection Networks Junming Xu,2014-01-15 Topological Structure and Analysis of Interconnection Networks Junming Xu,2013-04-17 The advent of very large scale integrated circuit technology has enabled the construction of very complex and large interconnection networks By most accounts the next generation of supercomputers will achieve its gains by increasing the number of processing elements rather than by using faster processors The most difficult technical problem in constructing a supercomputer will be the design of the interconnection network through which the processors communicate Selecting an appropriate and adequate topological structure of interconnection networks will become a critical issue on which many research efforts have been made over the past decade The book is aimed to attract the readers attention to such an important research area Graph theory is a fundamental and powerful mathematical tool for designing and analyzing interconnection networks since the topological structure of an interconnection network is a graph This fact has been universally accepted by computer scientists and engineers This book provides the most basic problems concepts and well established results on the topological structure and analysis of interconnection networks in the language of graph theory The material originates from a vast amount of literature but the theory presented is developed carefully and skillfully The treatment is generally self contained and most stated results are proved No exercises are explicitly exhibited but there are some stated results whose proofs are left to the reader to consolidate his understanding of the material *Handbook of Graph Theory, Combinatorial Optimization, and Algorithms* Krishnaiyan "KT" Thulasiraman,Subramanian Arumugam,Andreas Brandstädt,Takao Nishizeki,2016-01-05 This handbook is the first to present a unified comprehensive treatment of graph theory combinatorial optimization and related algorithmic issues It covers numerous topics of interest in applications in electrical communication computer social transportation biological and other networks The book provides readers with the algorithmic and theoretical foundations to understand phenomena as shaped by their graph structures develop needed algorithmic and optimization tools for the study of graph structures and design and plan graph structures that lead to certain desirable behavior *Combinatorial Algorithms* W. F. Symth,Subramanian Arumugam,2012-12-22 This book constitutes the thoroughly referred post workshop proceedings of the 23rd International Workshop on Combinatorial Algorithms IWOCA 2012 held in Krishnankoil Tamil Nadu India in July 2012 The 32 revised full papers presented were carefully reviewed and selected from a total of 88 submissions The papers are organized in topical sections in algorithms and data Structures applications including Bioinformatics Networking etc combinatorics of words and strings combinatorial optimization combinatorial enumeration decompositions and combinatorial designs complexity theory structural and computational computational biology and graph theory and combinatorics submissions *Electronics, Communications and Networks* Antonio J. Tallón-Ballesteros,Estefanía Cortés-Ancos,Diego A. López-García,2024-01-15 It is hard to imagine a world without electronic communication networks so dependent have we all

become on the networks which now exist and have become part of the fabric of our daily lives This book presents papers from CECNet 2023 the 13th International Conference on Electronics Communications and Networks held as a hybrid event in person in Macau China and online via Microsoft Teams from 17 20 November 2023 This annual conference provides a comprehensive global forum for experts and participants from academia to exchange ideas and present the results of ongoing research in state of the art areas of electronics technology communications engineering and technology wireless communications engineering and technology and computer engineering and technology A total of 324 submissions were received for the conference and those which qualified by virtue of falling under the scope of the conference topics were exhaustively reviewed by program committee members and peer reviewers taking into account the breadth and depth of the relevant research topics The 101 selected contributions included in this book present innovative original ideas or results of general significance supported by clear and rigorous reasoning and compelling new light in both evidence and method Subjects covered divide broadly into 3 categories electronics technology and VLSI internet technology and signal processing and information communication and communication networks Providing an overview of current research and developments in these rapidly evolving fields the book will be of interest to all those working with digital communications networks

Advances in Grid and Pervasive Computing Song Wu, Laurence Tianruo Yang, Tony Li Xu, 2008-05-13 Welcome to the proceedings of the 2008 International Conference on Grid and Pervasive Computing GPC 2008 which was held in Kunming Yunnan China May 25 28 2008 Gridcomputing presents a new trend in distributed computing for coordinating large scale heterogeneous resource sharing and problem solving in dynamic multi institutional virtual organizations Grid computing not only can be used for distributed supercomputing massive data processing but can also be a common platform and way for utility and service computing It covers mainframes or supercomputers as well as more powerful personal computers and even small and smart devices ranging from personal digital assistants to unseen chips in our cars appliances and telephones Projecting this trend into the future we envision an explosion of interconnected high performance computers and smart devices that can make our research and daily lives easier and more productive Grid and Pervasive Computing GPC is an annual international conference on the emerging areas of merging grid computing and pervasive computing GPC provides a high profile leading edge forum for researchers and engineers alike to present their latest research in the field of grid computing and pervasive computing

Computational Science - ICCS 2008, 2008 **Hybrid Information Systems** Ramakant Bhardwaj, Pushan Kumar Dutta, Pethuru Raj, Abhishek Kumar, Kavita Saini, Alfonso González Briones, Mohammed K.A. Kaabar, 2024-07-22 The book provides a comprehensive and cognitive approach to building and deploying sophisticated information systems The book utilizes non linear optimization techniques fuzzy logic and rough sets to model various real world use cases for the digital era The hybrid information system modeling handles both qualitative and quantitative data and can effectively handle uncertainty and imprecision in the data The combination of non linear optimization mechanisms fuzzy logic and rough sets

provides a robust foundation for next generation information systems that can fulfill the demands of adaptive aware and adroit software applications for the knowledge era The book emphasizes the importance of the hybrid approach which combines the strengths of both mathematical and AI techniques to achieve a more comprehensive and effective modeling process Hybrid information system modeling techniques combine different approaches such as fuzzy logic rough sets and neural networks to create models that can handle the complexity and uncertainty of real world problems These techniques provide a powerful tool for modeling and analyzing complex systems and the applications of hybrid information system modeling demonstrate their potential for solving real world problems in various fields

Performance of Distributed and Parallel Systems Toshiharu Hasegawa,Hideaki Takagi,Yutaka Takahashi,1989

Despite the proliferation and ever increasing need for distributed processing and parallelism in computer and communication systems their operational behaviour has been poorly understood This is due to the extreme complexity found in cooperative processing in modern computer systems and the complicated communication protocols for handling a variety of traffic in information network systems In order to cope with these developments mathematical modelling has become more and more sophisticated and tailored to individual problems However it is fair to say that the performance characteristics of today s and future systems cannot be fully analyzed by the techniques currently available This book is a result of the international seminar designed to promote progress in the development of techniques for resolving the performance issues of such complex systems
