Gray,2004 Auditing the Casino Floor Craig Robinson (Auditor),2001 Fraud Detection in White-Collar Crime Rohan Ahmed,2018-06-28 Bachelor Thesis from the year 2017 in the subject Computer Science Commercial Information Technology grade 1 3 Heilbronn University language English abstract White collar crime is and has always been an urgent issue for the society In recent years white collar crime has increased dramatically by technological advances The studies show that companies are affected annually by corruption balance sheet manipulation embezzlement criminal insolvency and other economic crimes The companies are usually unable to identify the damage caused by fraudulent activities To prevent fraud companies have the opportunity to use intelligent IT approaches The data analyst or the investigator can use the data which is stored digitally in today s world to detect fraud In the age of Big Data digital information is increasing enormously Storage is cheap today and no longer a

limited medium. The estimates assume that today up to 80 percent of all operational information is stored in the form of unstructured text documents. This bachelor thesis examines Data Mining and Text Mining as intelligent IT approaches for fraud detection in white collar crime. Text Mining is related to Data Mining. For a differentiation, the source of the information and the structure is important. Text Mining is mainly concerned with weak or unstructured data while Data Mining often relies on structured sources. At the beginning of this bachelor thesis, an insight is first given on white collar crime. For this purpose, the three essential tasks of a fraud management are discussed. Based on the fraud triangle of Cressey, it is shown which conditions need to come together so that an offender commits a fraudulent act. Following some well-known types of white collar crime, more detail is provided. Text Mining approach was used to demonstrate how to extract potentially useful knowledge from unstructured text. For this purpose, two self-generated e-mails were converted into structured format. Moreover, a case study will be conducted on fraud detection in credit card dataset. The dataset contains legitimate and fraudulent transactions. Based on a literature research, Data Mining techniques are selected and then applied on the dataset by using various sampling techniques and hyperparameter optimization with the goal to identify correctly predicted fraudulent transactions. The CRISP-DM reference model was used as a methodical procedure.
