Fernandez, Tomás Lang, The collection of papers in this book summarize recent progress in computer architecture Since the subject is broad the leitmotif for this volume is the support of software at the architectural level i e architectures and features whose main purpose is to support the efficient execution of high level languages operating systems and specific applications Understanding these subjects requires at least an introductory course on computer architecture

**International Workshop on Evidence-Based Technology Enhanced Learning** Pierpaolo Vittorini, Rosella Gennari, Ivana Marenzi, Fernando de la Prieta, Juan M. Corchado Rodríguez, 2012-03-05 Research on Technology Enhanced Learning TEL investigates how information and communication technologies can be designed in order to support pedagogical activities The workshop proceedings collect contributions concerning evidence based TEL systems like their design following EBD principles as well as studies or best practices that educators education stakeholders or psychologists used to diagnose or improve their students learning skills including students with specific difficulties The international ebTEL 12 workshop wants to be a forum in which TEL researchers and practitioners alike can discuss ideas projects and lessons related to ebTEL The workshop takes place in Salamanca Spain on March 28th 30th 2012 Tutorial William Stallings, 1986 One of the most important innovations in computer development is the reduced instruction set computer RISC An analysis of the RISC architecture brings into focus many important issues in computer organization and architecture The objectives of this tutorial are to 1 provide a comprehensive introduction to RISC and 2 give readers an understanding of RISC design

issues and the ability to assess their importance relative to other approaches This tutorial is intended for students professionals in the fields of computer science and computer engineering designers and implementers and data processing managers who now find RISC machines among their available processor choices **Reduced Instruction Set Computers** William Stallings,1990 An introduction to RISC design issues presented via a combination of original material and reprinted articles For a broad range of readers students and professionals of computer science and engineering designers and implementers and data processing managers A basic general background in computer **Encyclopedia of Microcomputers** Allen Kent,James G. Wah,Guo-Jie Li,1986 **A Practical Introduction to Computer Architecture** Daniel Page,2009-04-21 It is a great pleasure to write a preface to this book In my view the content is unique in that it blends traditional teaching approaches with the use of mathematics and a mainstream Hardware Design Language HDL as formalisms to describe key concepts The book keeps the machine separate from the application by strictly following a bottom up approach it starts with transistors and logic gates and only introduces assembly language programs once their execution by a processor is clearly defined Using a HDL Verilog in this case rather than static circuit diagrams is a big deviation from traditional books on computer architecture Static circuit diagrams cannot be explored in a hands on way like the corresponding Verilog model can In order to understand why I consider this shift so important one must consider how computer architecture a subject that has been studied for more than 50 years has evolved In the pioneering days computers were constructed by hand An entire computer could just about be described by drawing a circuit diagram Initially such diagrams consisted mostly of analogue components before later moving toward digital logic gates The advent of digital electronics led to more complex cells such as half adders multiplexers and decoders being recognised as useful building blocks [Resources in Education](#) ,1993 **Parallel Computation and Computers for Artificial Intelligence** J.S. Kowalik,2012-12-06 It has been widely recognized that artificial intelligence computations offer large potential for distributed and parallel processing Unfortunately not much is known about designing parallel AI algorithms and efficient easy to use parallel computer architectures for AI applications The field of parallel computation and computers for AI is in its infancy but some significant ideas have appeared and initial practical experience has become available The purpose of this book has been to collect in one volume contributions from several leading researchers and pioneers of AI that represent a sample of these ideas and experiences This sample does not include all schools of thought nor contributions from all leading researchers but it covers a relatively wide variety of views and topics and in this sense can be helpful in assessing the state of the art We hope that the book will serve at least as a pointer to more specialized literature and that it will

stimulate interest in the area of parallel AI processing It has been a great pleasure and a privilege to cooperate with all contributors to this volume They have my warmest thanks and gratitude Mrs Birgitta Knapp has assisted me in the editorial task and demonstrated a great deal of skill and patience Janusz S Kowalik vii INTRODUCTION Artificial intelligence AI computer programs can be very time consuming Bibliographic Guide to Computer Science ,1990
