Spectroscopy Volume One:

Spectroscopy Stanley D. Walker, H. Straw, 1966 **Spectroscopy** B. Straughan, 1976-06-10 It is fifteen years since Walker and Straw wrote the first edition of *Spectroscopy* and considerable developments have taken place during that time in all fields of this expanding subject In atomic spectroscopy for example where the principles required in a student text have been laid down for many years there have been advances in optical pumping and double resonance which cannot be neglected at undergraduate level In addition nuclear quadrupole resonance n q f and far infrared spectroscopy now merit separate chapters while additional chapters dealing with Mössbauer spectroscopy photoelectron spectroscopy and group theory are an essential requisite for any modern spectroscopy textbook When the idea for a new edition of *Spectroscopy* was first discussed it quickly became clear that the task of revision would be an impossible one for two authors working alone Consequently it was decided that the new edition be planned and coordinated by two editors who were to invite specialists each of whom had experience of presenting their subject at an undergraduate level to contribute a new chapter or to revise extensively an existing chapter In this manner a proper perspective of each topic has been provided without any sacrifice of the essential character and unity of the first edition The expansion of subject matter has necessitated the division of the complete work into three self contained volumes Volume I includes atomic n m f n q f e s r and Mössbauer spectroscopy

Handbook of Spectroscopy Günter Gauglitz, Tuan Vo-Dinh, 2002 **Spectroscopy volume one atomic, microwave and radio-frequency spectroscopy** S. (Samantha Louise) Walker, H. Straw, 1961 **Progress in Infrared Spectroscopy** Infrared Spectroscopy Institute, 2014-09-01 **Handbook of Spectroscopy** J. W. Robinson, 2019-08-08 The principle objective of this handbook is to provide a readily accessible source of information on the major fields of spectroscopy Specifically these fields are NMR IR Raman UV absorption and fluorescence ESCA X Ray absorption diffraction fluorescence mass spectrometry atomic absorption flame photometry emission spectrography and flame spectroscopy It will be of particular use to analytical organic inorganic chemists or spectroscopists wishing to identify materials or compounds The book will indicate to them which techniques may provide useful information and what kind of information will and will not be provided In short it will be a companion to those spectroscopists who have need to broaden their horizons into the major fields discussed Raman Spectroscopy, Volume I Günter G. Hoffmann, 2019-01-16 The book provides an up to date overview of the fast growing area of Raman spectroscopy The two volume work describes how analytic methods using Raman spectroscopy allow for the chemical analysis of materials providing even spatial resolution without precedent In addition external perturbations strain temperature pressure on molecules and their alignment can be analyzed Raman spectroscopy can also provide information about the interactions of components again at a high level of spatial resolution In the form of tip enhanced Raman spectroscopy TERS the method is a valuable tool for nanotechnology This book is intended for researchers or lecturers in chemistry and materials science who are interested in the composition and properties of their samples It

describes how Raman spectroscopy will enable them to examine thin layers surfaces and interfaces and improve their knowledge about the properties of composites In addition it can serve as a short introduction to vibrational spectroscopy

Handbook of Humidity Measurement, Volume 1 Ghenadii Korotcenkov,2018-03-15 The first volume of The Handbook of Humidity Measurement focuses on the review of devices based on optical principles of measurement such as optical UV fluorescence hygrometers optical and fiber optic sensors of various types Numerous methods for monitoring the atmosphere have been developed in recent years based on measuring the absorption of electromagnetic field in different spectral ranges These methods covering the optical FTIR and Lidar techniques as well as a microwave and THz ranges are discussed in detail in this volume The role of humidity sensitive materials in optical and fiber optic sensors is also detailed This volume describes the reasons for controlling the humidity features of water and water vapors and units used for humidity measurement
