The Universe is God Chiriac Dan,2013-08-31 The book is a monologue that tries to capture the likely forms of God The basic idea is that the universe is God Himself as a conscious physical entity whose conscience summarizes our consciences We managed to sustain this universal consciousness The galaxy is just a cell of the immense being and billions of stars are mitochondria that give energy to the Universe God It s a book about perception which includes essays on various topics discussed and analyzed by humans for thousands of years A more forceful and sincere expression of an author who lives on a speck of dust in the universe fascinated by the exponential evolution of human consciousness Virtual origin of the universe is reasoned It s a book that tries compatibility between evolution and creation in that God Himself is created by evolution

The Speed of Dark Elizabeth Moon, In the near future a high functioning autistic adult is offered an experimental treatment to reverse the effects of autism to make him think and act and be like everyone else But if he were free of autism would he still be himself

MY FATED LIFE Cherry Hinkle,2023-08-08 My Fated Life is a collection of 108 short stories in 215 pages Most of the events in this book are real but the final results in a few of stories they remain unknown The events were told exactly as they happened Most of the stories actually happened to me and I suspect it is because I really love life

Big bang of scientific idiocy Pavlovich Konstantin ,2025-06-26 The book debunks all the myths of modern cosmological views on the evolution of the Universe reveals gross errors that led to the dead end of modern cosmology In a popular form on a solid foundation of physical laws the absurdity of any cosmological chimeras such as dark matter energy big bangs wormholes and other inflations has been irrefutably proven Instead of these ridiculous inventions a description is given of real phenomena occurring both in outer space and in the immediate vicinity around us in the so called scientific community The book is intended for a wide range of readers interested in the structure of the surrounding world and can also be used as a textbook for studying astrophysics

Special Report Series ,1929 Metric Theories of Gravity Alexander N. Petrov,Sergei M. Kopeikin,Robert R. Lompay,Bayram Tekin,2017-04-24 By focusing on the mostly used variational methods this monograph aspires to give a unified description and comparison of various ways of constructing conserved quantities for perturbations and to study symmetries in general relativity and modified theories of gravity The main emphasis lies on the field theoretical covariant formulation of perturbations the canonical Noether approach and the Belinfante procedure of symmetrisation The general formalism is applied to build the gauge invariant cosmological

perturbation theory conserved currents and superpotentials to describe physically important solutions of gravity theories Meticulous attention is given to the construction of conserved quantities in asymptotically flat spacetimes as well as in asymptotically constant curvature spacetimes such as the Anti de Sitter space Significant part of the book can be used in graduate courses on conservation laws in general relativity THE SERIES DE GRUYTER STUDIES IN MATHEMATICAL PHYSICS The series is devoted to the publication of monographs and high level texts in mathematical physics They cover topics and methods in fields of current interest with an emphasis on didactical presentation The series will enable readers to understand apply and develop further with sufficient rigor mathematical methods to given problems in physics The works in this series are aimed at advanced students and researchers in mathematical and theoretical physics They can also serve as secondary reading for lectures and seminars at advanced levels **Divine Dharma Save-Seed** Satyajit Patidar,2021-05-14

I am on a mission to explain to the world the real fact that the human brain is NOT his mind rather his seed s DNA is his mind more specifically the blue strand of the DNA spiral Human brain is merely an evolved form of rRNA of the zygote which processes the mRNA and tRNA wirelessly Like the CPU of the computer brain is a non codon processing organ which processes the genetic codes of the seed s DNA mind through a wireless nerve system called Sushumna Ada Pingla To know the wireless processing of the seed genetics in the brain read this book Unless seeds are saved brain cannot produce any significant outcome If the seeds are saved then all the thoughts of the seed s mind come true naturally Understand follow and share Save Seed awareness to make the world a heaven *Understanding Relativity* Wouter Schmitz,2022-12-17 This book

bridges the huge gap between popular science and mathematical treatments of Einstein s theories It explains special and general relativity gravity black holes and gravitational waves also presenting current ideas about dark matter and dark energy The explanations are entirely non mathematical using many color pictures and clear concepts In this way the reader is led to a much deeper understanding than any popular science book can provide The author has written this book for everyone who wants to go beyond superficial descriptions of relativity s remarkable phenomena but is not equipped to read the professional literature and complicated math behind the theory By providing a complete description in terms of concepts and pictures the book answers many questions about why the theory works as it does For example it explains why and how momentum and pressure are related to gravity why and how mass causes spacetime to curve and how curvature tells objects how to move it also reveals the origin of the ring seen around the first ever image of a black hole Not least the reader will learn in detail how gravitational waves are produced and measured Since their conception the theories of relativity have appealed to the public s imagination Thanks to this book readers now have the opportunity to convert their fascination with the topic to a deep understanding **Unifying Systems** Aarne Mämmelä,2025-04-29 Interdisciplinary systems thinking is complementary but does not replace conventional disciplinary analytical thinking The book is valuable for researchers their advisors and other thinkers interested in deep knowledge of science Interdisciplinary systems thinking is valuable for three

reasons The goal of all science is a unified view of the world we cannot solve the significant problems of our time without interdisciplinary collaboration and general theories of systems and system archetypes support the solution to those problems System archetypes are generic system models that have stood the test of time As specialists within a discipline we must be able to communicate between disciplines Interdisciplinary generalists can offer us reliable visions and relevant research problems The goal of interdisciplinary research is to find unified solutions to those problems The book provides a lot of information from over a thousand sources in a structured manner to help the reader The book includes a comprehensive chronology vocabulary and bibliography The author has been a research professor in information engineering for over 25 years During his career he became interested in systems thinking which is closely related to the philosophy and history of science *A Conspiracy in Sci in Progres* , *Air Corps Information Circular* United States. Future Spacecraft Propulsion Systems and Integration Paul A.
