Substitutions In Dynamics Arithmetics And Combinatorics:

Substitutions in Dynamics, Arithmetics and Combinatorics N. Pytheas Fogg, 2003-10-24 A certain category of infinite strings of letters on a finite alphabet is presented here chosen among the simplest possible one may build both because they are very deterministic and because they are built by simple rules a letter is replaced by a word a sequence is produced by iteration These substitutive sequences have a surprisingly rich structure The authors describe the concepts of quantity of natural interactions with combinatorics on words ergodic theory linear algebra spectral theory geometry of tilings theoretical computer science diophantine approximation transcendence graph theory This volume fulfils the need for a reference on the basic definitions and theorems as well as for a state of the art survey of the more difficult and unsolved problems

Substitution Dynamical Systems - Spectral Analysis Martine Queffélec, 2010-01-30 This volume mainly deals with the dynamics of finitely valued sequences and more specifically of sequences generated by substitutions and automata Those sequences demonstrate fairly simple combinatorial and arithmetical properties and naturally appear in various domains As the title suggests the aim of the initial version of this book was the spectral study of the associated dynamical systems the first chapters consisted in a detailed introduction to the mathematical notions involved and the description of the spectral invariants followed in the closing chapters This approach combined with new material added to the new edition results in a nearly self contained book on the subject New tools which have also proven helpful in other contexts had to be developed for this study Moreover its findings can be concretely applied the method providing an algorithm to exhibit the spectral measures and the spectral multiplicity as is demonstrated in several examples Beyond this advanced analysis many readers will benefit from the introductory chapters on the spectral theory of dynamical systems others will find complements on the spectral study of bounded sequences finally a very basic presentation of substitutions together with some recent findings and questions rounds out the book *Ergodic Theory, Dynamical Systems, and the Continuing Influence of John C. Oxtoby*

Joseph Auslander, Aimee Johnson, Cesar E. Silva, 2016-11-29 This volume contains the proceedings of three conferences in Ergodic Theory and Symbolic Dynamics the Oxtoby Centennial Conference held from October 30 31 2010 at Bryn Mawr College the Williams Ergodic Theory Conference held from July 27 29 2012 at Williams College and the AMS Special Session on Ergodic Theory and Symbolic Dynamics held from January 17 18 2014 in Baltimore MD This volume contains articles covering a variety of topics in measurable symbolic and complex dynamics It also includes a survey article on the life and work of John Oxtoby providing a source of information about the many ways Oxtoby's work influenced mathematical thought in this and other fields Mathematics of Aperiodic Order Johannes Kellendonk, Daniel Lenz, Jean Savinien, 2015-06-05 What is order that is not based on simple repetition that is periodicity How must atoms be arranged in a material so that it diffracts like a quasicrystal How can we describe aperiodically ordered systems mathematically Originally triggered by the later Nobel prize winning discovery of quasicrystals the investigation of aperiodic order has since become a well established and rapidly

evolving field of mathematical research with close ties to a surprising variety of branches of mathematics and physics This book offers an overview of the state of the art in the field of aperiodic order presented in carefully selected authoritative surveys It is intended for non experts with a general background in mathematics theoretical physics or computer science and offers a highly accessible source of first hand information for all those interested in this rich and exciting field Topics covered include the mathematical theory of diffraction the dynamical systems of tilings or Delone sets their cohomology and non commutative geometry the Pisot substitution conjecture aperiodic Schrödinger operators and connections to arithmetic number theory
