The Adaptive Seascape David J. Merrell, 1994 Based on observational and experimental data in natural populations of plants and animals studied in the field and in the laboratory this perspective unravels the hidden and often poorly founded assumptions underlying some of the more troublesome controversies in evolutionary biology today **Half Life** APAC Press, Geoffrey P Forster, 2010-12-15 What is the lifetime of a corporation This is a critical question for it impacts not only how we make longer term investments in established corporations it also impacts how often we need to restructure an investment portfolio Large established and once successful corporations and their associated brands continually emerge and disappear in any healthy competitive business environment However an important trend is emerging in that the mean life time for large established corporations has more than halved in the last 50 years This observation is of critical importance to business analysts investors executives and corporate directors for it is a core parameter in determining the long term valuation of a business In *Half Life* Forster documents a detailed study of corporate survival trends and examines and extends the existing landscapes tools models and indexes used to monitor the corporate life cycle Forster goes on to describe the creation of a new business fitness landscape model introduces two new business risk parameters creates a new business diversity fitness index and completes a macro analysis of the extinction rates associated with the 100 largest corporations in the United States With these new tools Forster establishes a new model for viewing the mean life and half life of large corporations and for studying the impact that related and unrelated diversification in industry participation has on a corporation s effective lifespan Forster suggests that established corporations don t survive just by being the fittest but that they survive rapid discontinuous change by finding a new optimum position in a new business fitness landscape *Darwin's Devices* John Long, 2012-04-03 A director of biorobotics research at Vassar College demonstrates how applying principles of natural selection to robot design is revolutionizing ideas in both technology and evolution identifying the potential capabilities of a practice that combines experimental science engineering and natural process 14 000 first printing
