Trends In Commutative Algebra:

Trends in Commutative Algebra Luchezar L. Avramov, 2004-12-13 This book describes the interaction of commutative algebra with other areas of mathematics including algebraic geometry group cohomology and combinatorics Current Developments in Algebraic Geometry Lucia Caporaso, 2012-03-19 This volume based on a workshop by the MSRI offers an overview of the state of the art in many areas of algebraic geometry **Progress in Commutative Algebra 1** Christopher Francisco, Lee C. Klingler, Sean Sather-Wagstaff, Janet C. Vassilev, 2012-04-26 This is the first of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra These volumes present current trends in two of the most active areas of commutative algebra non noetherian rings factorization ideal theory integrality and noetherian rings the local theory graded situation and interactions with combinatorics and geometry This volume contains combinatorial and homological surveys The combinatorial papers document some of the increasing focus in commutative algebra recently on the interaction between algebra and combinatorics Specifically one can use combinatorial techniques to investigate resolutions and other algebraic structures as with the papers of Fl ystad on Boij S derburg theory of Geramita Harbourne and Migliore and of Cooper on Hilbert functions of Clark on minimal poset resolutions and of Mermin on simplicial resolutions One can also utilize algebraic invariants to understand combinatorial structures like graphs hypergraphs and simplicial complexes such as in the paper of Morey and Villarreal on edge ideals Homological techniques have become indispensable tools for the study of noetherian rings These ideas have yielded amazing levels of interaction with other fields like algebraic topology via differential graded techniques as well as the foundations of homological algebra analysis via the study of D modules and combinatorics as described in the previous paragraph The homological articles the editors have included in this volume relate mostly to how homological techniques help us better understand rings and singularities both noetherian and non noetherian such as in the papers by Roberts Yao Hummel and Leuschke **RECENT TRENDS IN SCIENCE AND TECHNOLOGY (RTST-2023)** Dr. Sr. Shanta Joseph, Dr. Usha Shukla, Dr. Pramod Yadaw, Mrs. Mamta Kashyap, Dr. W.B. Gurnule, 2024-05-29 International Seminar Research Papers Proceeding on Recent Trends in Science and Technology RTST 2023 **Progress in commutative algebra** Sean Sather-Wagstaff, 2012-04-13 This is the second of two volumes of a state of the art survey article collection which emanates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra The current trends in two of the most active areas of commutative algebra are presented non noetherian rings factorization ideal theory integrality advances from the homological study of noetherian rings the local theory graded situation and its

interactions with combinatorics and geometry This second volume discusses closures decompositions and factorization

Commutative Algebra - Proceedings Of The Workshop Giuseppe Valla, Ngo Viet Trung, Aron Simis, 1994-08-19 In a relatively short time commutative algebra has grown in many directions Over a period of nearly fifty years starting from the so called homological period till today the area has developed into a rich laboratory of methods structures and problem solving tools One could say a distinct modern trend of commutative algebra is a strong interaction with various aspects of Combinatorics and Computer Algebra This has resulted in a new sense of measuring for old assumptions and a better understanding of old results At the same time Invariant Theory and Algebraic Geometry remain constituents of an everlasting classical source responsible for important themes that have been developed in Commutative Algebra such as deformation linkage algebraic tori and determinantal rings etc This volume of proceedings is well entrenched on the lines of development outlined above As such it aims to keep researchers and mathematicians well informed of the developments in the field

Combinatorial Aspects of Commutative Algebra Viviana Ene, Ezra Miller, 2009-11-25 This volume contains the proceedings of the Exploratory Workshop on Combinatorial Commutative Algebra and Computer Algebra which took place in Mangalia Romania on May 29 31 2008 It includes research papers and surveys reflecting some of the current trends in the development of combinatorial commutative algebra and related fields This volume focuses on the presentation of the newest research results in minimal resolutions of polynomial ideals combinatorial techniques and applications Stanley Reisner theory and Alexander duality and applications of commutative algebra and of combinatorial and computational techniques in algebraic geometry and topology Both the algebraic and combinatorial perspectives are well represented and some open problems in the above directions have been included
