## **Subset Fortran77:**

**Fundamentals of FORTRAN 77 Programming** Robert C. Nickerson,1985      **Automatic Performance Prediction of Parallel Programs** Thomas Fahringer,2012-12-06 Automatic Performance Prediction of Parallel Programs presents a unified approach to the problem of automatically estimating the performance of parallel computer programs The author focuses primarily on distributed memory multiprocessor systems although large portions of the analysis can be applied to shared memory architectures as well The author introduces a novel and very practical approach for predicting some of the most important performance parameters of parallel programs including work distribution number of transfers amount of data transferred network contention transfer time computation time and number of cache misses This approach is based on advanced compiler analysis that carefully examines loop iteration spaces procedure calls array subscript expressions communication patterns data distributions and optimizing code transformations at the program level and the most important machine specific parameters including cache characteristics communication network indices and benchmark data for computational operations at the machine level The material has been fully implemented as part of P3T which is an integrated automatic performance estimator of the Vienna Fortran Compilation System VFCS a state of the art parallelizing compiler for Fortran77 Vienna Fortran and a subset of High Performance Fortran HPF programs A large number of experiments using realistic HPF and Vienna Fortran code examples demonstrate highly accurate performance estimates and the ability of the described performance prediction approach to successfully guide both programmer and compiler in parallelizing and optimizing parallel programs A graphical user interface is described and displayed that visualizes each program source line together with the corresponding parameter values P3T uses color coded performance visualization to immediately identify hot spots in the parallel program Performance data can be filtered and displayed at various levels of detail Colors displayed by the graphical user interface are visualized in greyscale Automatic Performance Prediction of Parallel Programs also includes coverage of fundamental problems of automatic parallelization for distributed memory multicomputers a description of the basic parallelization strategy and a large variety of optimizing code transformations as included under VFCS
